REVERENDISSIMO
IO. MATTHAEO GIBERTO VERONAE EPISCOPO PONTIFICIOQVE LEGATO,

PETRVS PITATVS .S. PERPETVAM.

CVm te quamplurimis rerum curis, potioribusq; disciplinarum studijs detentum videam, vtpote qui Iuri Pontificio, atq; ecclesiasticis institutis, ac diuinæ legi assiduus incumbas: Quibus ecclesiæ tuæ cœtum, ac Veronensem gregem tibi cœlitus commissum sancte regas, foueas, atq; gubernes. Haud quicquam profecto fari tecum auderem, ni te quarumcunq;, vel minimarum etiã bonarum artium cupidum, & amatorem perpenderem. Propterea haudquaquam prætermittendum mecum duxi, quin ex studiorum nostrorum vigiliis quid tibi licet paruulum, apud me tamen non minimum impertirem, cum nihil mihi amplius reliquum sit, quàm meas multorum annorum vigilias, & animum pro te in omnibus, quę ad dignitatis tuę commodum, vel vtile cedant (cum vires non suppetant) paratum penitus impendere. Quòd si quid in his animaduertere, aut existimarem penes catholicorum decreta, aut diuinæ legis instituta suspitioni obnoxium contineri, non auderem profecto id tuæ offerre sanctitati: vt ea sunt, quæ sub falsò Astronomiæ nomine veræ huic, ac naturali Theologię immiscentur, quę'ue cõtra humanę voluntatis arbitrium, atque ex fatali etiam necessitate, insolentissime tamen, euenire dicuntur. Ex quo Mathematicos illo Gregorius redarguit, qui asserunt, quòd si quis sub signo Aquarii natus fuerit, piscatorum ministerium sortietur, cum tamen alicubi aliquem hoc sub signo nasci contingat, vbi piscatoris officium minime exerceri possit. Et sic de similibus. Quorum dicta, dum necessitatem absolutam intendunt, nobis cum ipsomet Gregorio Pont. Maximo consentientibus, merito quidem abigenda, atq; explodenda sunt, secus dum inclinationem, ac dispositionem contingentem præsupponunt. Quibus reiectis, per ea quæ hic inferius adducentur, in notiorem altissimarum rerum cognitionem peruenicmus, atq; ex splendidissima, ornatissimaq; cœlestium orbium, luminosiorumq; corporum dispositione, ipsorumq; motuum, & radiationum qualitate, futuris huius

ſęculi contingentibus perſpectis, mutationibus itidem, atq; alterationibus, quas ab eiſdem, primo tamen operante motore, recipiunt, de his, inquam, quę ab ipſo cœli influxu generantur, & corrumpuntur (cum per ſenſibilia intellectualia ad inuiſibilium cognitionem ueniamus) ad immenſam creatoris ipſius bonitatem, magnitudinem, poteſtatem, ſapientiam, uirtutem, & gloriam contemplandam, uenerandamq;, & adorandam ducemur: qui ſic cuncta miniſtrãdo gubernat, ut quaſq; res proprios motus, nec ſine ipſo tamen, agere ſinat. Ulterius præter ea, quę Reuerendiſſimę Dominationi tuæ offero, poſt ueræ inquam, nec ſuperſtitioſæ Aſtronomię rudimenta, certa ineſt paſſionis Dominicæ excuſſio: quæ olim inter Gręcos, atq; occidentalis eccleſiæ patres in cœna domini circa agni eſum agebatur, queq; modo inter Latinos plures verſatur circa lachrymoſum, ſalubrem tamen diem illum, quo uerus, nec myſticus amplius paſcalis agnus pro ſalute humani generis Crucis ligno ultro affixus pependit. Quę ſingula demum pro ſymbolico operi huic noſtro annexa, Paulo. iij. Pontifici Max. ut alias dicata, cernuntur. Hoc igitur ſynceræ Aſtrologię opus tuę ingenue mittimus amplitudini, ſi quando aliquid ocii nactus fueris, deguſtandum, tuoq; rectiſſimo examini trutinandum. In quo ſi quid diuinæ legi (quod minime intendimus) aduerſum perſenſeris, id tuę com mittimus authoritati penitus abolendum, uel in melius commutandum.

PROOEMIVM.

EPHEMERIDES nostras annorum quinque. 1552. 1553. 1554. 1555. 1556. quas modo præcedentibus adiecimus, non ad Tubingæ meridiem (vt priores) verum ad Venetiarum vrbis longitudinem exactissimo calculo elaborauimus, Hęc est enim Venetę, atq; maritimę regionis, nec minimę partis Gallię cisalpinę, nedum patrię nostrę domina, & alumna, vrbium facile princeps, ac totius ferè orbis celebratissimum emporium. Hęc est (vt dicitur) vrbs illa auri diues, sed ditior famę, potens opibus, sed virtute potentior. solidis fundata marmoribus, sed solidiore etiam fundamento ciuilis concordię stabilita, salsis cincta fluctibus, sed salsioribus tuta cōsiliis. Hæc vrbi, ac patrię nostrę inclytæ vsqueadeo clemētissime moderatur, eandē sapientissime, vt vrbes alias, regit, atq; gubernat, vt nō minori eam dilectionis affectu amplexari videatur, q̃ olim Romano senatui, Octauio quoq;, ac Galieno Imperatoribus pergrata fuisse tradatur, a' quibus olim Romana colonia (quod vetustū in porta Bursari Veronę cognominata epigramma testatur) non indigne quidem effici meruit, variis q̃dē ac pluribus ornamētis, atque nobilissimorū ędificiorū monumētis exornata. Quibus omissis (quādoquidem innumeras illius, ac patrię nostrę laudes, atq; antiquissima ipsius ędificia, vel ea etiam, quę regum, ac principum vetustas sedes tum Pipini, tum Theodorici huius Gothorum, illius Italię regis testantur, nostrę non est mentis enarrare, quę duobus aliis relinquo, quorum alter hæc ciuis noster nō vulgari oratione descripsit, atq; alter ex Germania licet oriūdus, Veronę tn̄ alumnus vtrasq; huius. s. atq; illius laudes nō īferiori forsitan Ascręo, carmie cecinit) Ephemerides nostras dicimus ad longitudinem computatas graduum triginta quatuor cum dimidio ferè ab occidente habitato, quę Venetiarum vrbi cōsimiter arum emensione sub latitudine graduum quadragintaquinq;, minutorum sexdecim, Veronę quoq; non minus congruenti compensatur, a' Tubingę meridie (ad quem pręcedentia ad annum vsq;. 1551. diaria computantur) per minuta quatuordecim horarum, vel propè distās, atq; a Toleto (vnde Alphonsi radices in cœlestibus motibus assumūtur) gradibus vigintitribus, ac minutis triginta ferè ex ęquinoctiali, qbus ho

ta vna minuta triginta quatuor correspondent. Quibus ab annis integris 1551. surreptis, atque ab Era Christi per Alphonsi tabulas ex planetarũ motibus sumpta radice, per ipsarum canones reliqua operãtes, ad prędictum vrbis Venetę meridiẽ ęqualis scilicet atq; astronomici diei exordium (nulla hic ppterea addita, vel diminuta ęquatiõe dierũ, aliasq; cõiũctioni bus luminariũ atq; planetarũ radiatiõibus superaddita) quosq; cœlestes motus, solisq; ac lunæ coitus cũ oppositiõibus veris & inęqualibus q̃ sync erissime supputauimus. Quod si modo Ioãnis Stœfleri supputationes in ipsius Ephemeridũ pcedentium annorũ descriptionibus a nostris p minuta. 20. horarũ siue plus mõ, vel minus diuersificari videantur, atq; ideo planetarũ motus, siue et cõiunctiones luminarium, atq; oppositiones per tantu tpis spatium pueniant, ac nostræ nõ minus tantũdem tardiores appareant, ne mireris quęso, quãdem ipse in ęquinoctii annotatione, atq; oppositionibus luminarium in paschali tabula p ipm in nouo Romano calendario descriptis, a Pauli episcopi Forosempronienfis, ac nostra calendarii reformationis computatiõe per Alphonsi tabulas diligentissime examinata, per tantũ temporis spatium preueniẽdo discrepat. Anno nãq; Christi domini. 1520. vbi nos cum prefato Paulo ęquinoctium vernũ, siue introitum solis in primum Arietis punctũ ad meridiem vrbis Romę decimo Martii die horis. 3. minutis. 28. notauimus, atq; anno altero 1521. horis. 9. mi. 17. post prædictę vrbis meridiem idipsum collocauimus. Ille hoc horis. 8. mi. 36. atq; alterum hor. 2. mi. 47. post Tubingæ meridiem statuit. Quibus modo adhibitis minutis. 23. horarum differentię meridianorũ Romę, & Tubingę (quot ille in calẽdarii noui, atq; eiusdem Ephemeridium editione cum Ioanne de Regio monte addenda proposuit) adhuc vtriusq; equinoctii sedis collatione facta, minor erit eiusdem Stœflerini numerus mi. 18. Et sic per tantum temporis spatiũ, vel circiter ęquinoctia quælibet hunc ipsum anticipasse perspicitur. Similis quoq; vel maior etiam in coniunctionibus mediis, atq; oppositionibus luminarium temporis premissi diuersitas reperitur. Hic nanq; paschalem oppositionem mediam secũdo Aprilis die anni prædicti. 1520. horis. 8. mi. 54. descripsit, quam Paulus episcopus eiusdem diei horis. 9. mi. 40. assignauit. Atq; alterã hic modo anno. 1521. nihil ab Alphonsi calculo discrepans, vigesimo secũdo Martii die horis. 18. mi. 29. (quod & nos fecimus) deputauit. Stœflerinus autẽ horis. 17. mi. 43. eiusdem diei notauit. Quã de re, quãdoquidem (adhibita etiam vt supra meridianorum distantia) non minor in veris, & ęqualibus luminarium cõiunctionibus, nec dissimilis in planetarũ motibus anticipatio reperitur, nõ parũ quidem de eo admirãdum extat. Quũ maxime idẽ Stœflerinus hisce vel similibus Alphonsi tabulis in eiusdem supputationibus cousus ęque fue-

rit, dum propositione. 34. sub litera. ꝺ. & alibi, hoc idem annuat, dum inquit. Supputatorias tabulas mihi visu habitas, ab alphonsinis nusq̃ discrepantes in manibus recepimus & cętera. Quod si ab eisdem dissentire ipsi modo visum fuit, atq; in annua solari quantitate, Albategni sententię, vel aliorum forte minori hanc temporis spatio, q̃ Alphonsi tabulę absoluentium inherẽdo, certam prędictorũ minutorũ temporis prӕuentionẽ, aut secus erroris alicuius notam in pręmissis aliqualiter sensibilem nouit, cur non illam alicubi editionum suarum palam ostendendo aperuerit, nõ parum qdem admirationis nobis & aliis quoq; attulit, quod Paulus prędictus, Nicolaus Cusanus, Petrus Cameracensis ambo Romanӕ ecclesię Cardinales, Campanus quoq;, Augustinus Ritius, Hieronymus Castilioneus, ac demum cõterraneus, & ciuis noster Frastorius ille Medicorum, ac Philosophorũ, vel etiam vatum pręclarissimus minime obticuerunt. Sed neq; tamen ipsius Stoefflerini Ephemerides in planetarum congressibus, atq; stellarum fixarum motibus ab omni erroris crimine purgãtur. quod cernentibus sensibiliter innotuit in coniunctione magna Saturni & Martis anno domini. 1536. Quę. 25. Maii in eiusdem diariis annotatur. Cum tamen diebus circiter tribus coelo palàm pręcessisse, ac vulgaribus per dies plures etiam prӕuenisse visa sit. Quũ hi tamen per visualem lineam ab oculis eorum ad stellas ipsas fallerentur, minime percipientes alium esse circuli transitum per polos zodiaci, & centum stellӕ, qui stellarum longitudinem metitur, alium autẽ circulum, qui p Zenith nostrum, siue horizontis polum, ac stellӕ centrum pertransit, quiq; altitudinem stellę, non longitudinalem distantiam ostendit. Nec me fugit aliquos etiam non vulgariter doctos, atq; astronomicę artis non ignaros prӕdictas Alphonsi, atq; aliorum coelestium motuum tabulas oẽs damnare, q̃ scilicet ex aceruatione minutiorum aliquot in mediis planetaꝝ, ac coelestium orbium motibus omissorum per multum temporis spatiũ erroris congeriem clanculum adducãt. quod iudiciarię tantum imbuto, ac mathematicӕ artis immuni facile credo persuaderi poterit, non tñ arithmeticam vel mediocriter ẽt calenti. Qui datis etiã octauis triginta motus alicuius in anno ꝑtermissis, hisq; p. 6000. pductis, sexta quinquaginta tñi in annis totidẽ ex cõgerie ipsa eduxerit. Dicẽdũ ẽ igif q̃ oĩum ferẽ mathematicoꝝ ascẽsu, Alphõsus ipse maximã p̃ cęteris planetaꝝ motibus veritatẽ adiunxerit (licet ab aliqbus ĩ stellaꝝ fixaꝝ & augiũ annotatiõe arguatur) & iam annis pluribus elapsis eclypses luminarium, & reliquorum plenatarũ veri motus cõprehenduntur. Et si quis error aliquando in Saturni, & Martis motu (vt prędiximus) reperiatur, qui vel per suos incognitos orbes, vel per octauӕ sphӕrӕ motum adhuc nobis ignotum, regulari non possit, per quam planetarum orbes aliqualiter.

agitari censentur, eadem ratione, qua medicina, & reliquę artes per sensi/bilesetiam, vel minimos errores non repelluntur, & eademmet ipsę astro logicę tabulę minime abdicari debent. Et si nãque medicus (vt Abiosus inquit) alterationem complexionis ab vno mense ad alium nõ cognoscit, ipsam tamen per discrepantiam qualitatum in annis decem vel pluribus comprehẽdit, vt à sanguinea ad cholericã complexionem migrasse. Nec minus si superiorum planetarum motus ex octaui orbis motu agitari & cõcitari possunt, & propterea tabularis ratio in aliquo deficiat, nouam ta/men per obseruationem mediantibus geometricis instrumẽtis corrigi, & emendari possunt. Quod Ptolemæus maxime in compositione magna Almagesti obseruandum pręcepit, ad hoc vt astrologorũ error saltem sen sibilis minime appareat. Quod quoniam per prędecessores nostros, & Al phonsum deniq; in sole & luna, ac inferioribus etiam ob crebras ipsorum reuolutiones longe magis obseruatũ videmus, ideo nullus in his, vel sen/sibilis saltem error inotuit. Illos ergo maiores, & antiquiores nobis prot/sus imitãdos duximus, quod Ioãnes ille Mõteregiẽsis, Paulus episcopus Forosempronieñsis, Ioãnes Stoeflerus (exclusa pdictorũ minutorũ tpis an/ticipatiõe) Ioãnes Blanchinus, & plures alii a uo nostro mathematici in/signes ęque effecere. donec inquam & quousq; iuniorum obseruationes, non semel, sed pluries, nec in planetarum motibus tm̃, atq; annua solis re uersione, q̃ ẽt in octaui orbis circulatione, p aliquod tpis spatiũ cõprobẽ tur. quum singuli inferiorum orbium motus à superiori etiã aliquatenus ęque dependeant. propterea non potest duobus pedibus claudus, si vno tñ sanetur, rectus incedere. Quare tritam modo semitam prosequendo, planetarum, ac stellarum loca consulto nolui temere immutare (quũ non mea sit, qui mathematicorũ omnium peripsema, vel minimus equidem mihi videor) nisi quantum per antiqua Gręcorum, atq; latinorum exem/plaria syderum loca aliqua emendauimus, nec minus cœlo ęque decurrẽ/tia trutinauimus, quę pluribus in locis scriptorum incuria longe depra/uata reperiuntur. Quemadmodum postremũ fusionis stellam Anno do/mini labente. 1535. die. 22. Iulii cum Ioue vidimus summo cœli cardi/ne collocatam, eodem pariter momẽto cœli medium pertransire. Quarũ modo ambarum stellarum latitudine perspecta, adhibitaq; vtriusq; diffe rentię norma ob remotionẽ à nonagesimo gradu ecclypticę & medii cœli transitum, easdem cum septima piscium parte minus tertia gradus vnius, vel circiter meridianum circulum propriis oculis pertransire perspexi. quo cum gradu stella eadem fusionis aquæ cœlum ipsum ex tabulis no/stris mediare concernitur, vigesimumseptimum piscium gradum præ/senti tempore decurrens, quum tamen stella ipsa iuxta deprauatam ta/bularum pluriũ, atq; etiam Ioãnis Monteregiensis, siue Stoefierini ephe/

meridium impressionem per septem gradus longe a veritate labetur, vigesimam tãtũ piscium partem occupans. Prædictam stellæ annotationem ex altitudine ipsius pluries in meridiano constitutæ, maxime anno prædicto ex mediatione cœli, & lunæ & stellæ ipsius vltimo Nouembris die verissimam prorsus agnouimus. Verum his omissis, atq; aliis, quę circa planetarum motus, & octaui cœli orbis dici potuissent, tanq̃ longiori, ac potiori, q̃ nostri, atq; astrologorum plurium, nec vulgarium quidem examine indigentibus: quibus impręsentiarum curam hanc merito delegamus. Prętermissis etiam his quæ super Ephemeridium cõmentaria addu ci poterant, alias per Ioannem Monteregiensem, ac Stœfflerinum lucu lentissime pertractata, reiectisq; prius quorundam decipientium errori bus, pmissisq; his, quæ Isagogicæ doctrinæ omnino necessaria visa fuerint, Ad electionum canonum normam, in primis aphorismos quosdam sapientum summatim colligendo, transire visum fuit, atq; aliqua, anteq̃ ad Ephemiridium exhibitionem, ortusq;, & occasus syderum peruenia mus, non minus astronomię professoribus vtilia, q̃ scitu iucũda (diuino opitulante numine) in lucem ex ordine exprimere statuimus.

¶ Quomodo homini futura prænoscere, atq; vaticinari liceat contra vulgarem quorundam sententiam.

Abiectis execrabilibus artis magicæ vanitatibus, diabolicę inq̃, non diuinę, ac naturalis, reiectisq; aliis superstitionibus, atq; illorum di ctis, qui ex astris omnia futura necessitate fatali euenire senserunt, quiq; terminos astronomicæ potestatis respectu liberi arbitrii superbe excesse runt, opinioni quoq; eoꝝ refragabimur, qui futura aliqua quauis huma na scientia prædici posse abnegantes (vt astronomia, chiromantia, phy sionomia, & geomantia, quam sors, & casualis figuratio, leuitasq; inanem, & suspectam reddit) dum hoc solũmodo diuinæ menti reseruatum astruunt, ipsius bonitati, ac liberalitati derogant. Si nanq; Deus immen sa suipsius munificentia cœlestibus corporibus, ac elementaribus virtu tibꝰ nouas res quotidie, vt mineralia, vegetabilia, nouaq; animalia, & ho minem (quum Sol & homo generent hominem) alterum quoq; produce re, ac generare concessit, volucres quoq; cœli, & animalia quędam natu rali instinctu aeris perturbationem, & temperiem, futuramq; cantu sere nitatem, vel motu aliquo corporis prænũtiare donauit: Quis illũ homi ni suam ipsius imaginem gerenti, cuiq; diuinum quid afflatu suo inspira uit, &, quod maius est, cui hominẽ alterum a peccatis absoluere, & emũ dare concessit (quod diuinæ tm̃ competit potestati) futura modo aliqua prænoscere, magisq̃ volatilia, & quadrupedia, & altius elargitum fuisse negabit? Prę cæteris ergo Noam, exinde patres alios (si Iosepho, & Beroso Chaldęo credimus) aliis nõ minus diuinis, & cœlestibus discipli

nis edoctum Astrologiam coelitus, (quod facile credi potest) edocuit, qua ille Armenios, & Schytas parum post vniuersale diluuium instruxit, vt quid ab anni initio, & cardinibus eius per anni reliquum futurũ esset decernerent, ob quã rem illum diuinæ mentis participem esse dixerunt. Sic pater ille multarũ gentiũ Chaldęos, & Aegyptios ęque doctos fecit. Nec minus & nos, per hanc (quã theologiam naturalem Petrus Cardinalis Cameracẽsis in libro Concordantiæ Astrologiæ cum Theologia, merito nuncupauit) dum syderum cursus emensi, atq; edocti fuerimus, agnito cœli situ, ac stellarum dispositione per interrogationis ascendens, siue per horam exitus infantis ex vtero materno, perq; coniunctiones, & aspectus planetarum, atq; eclipses luminarium futura contingentia in hoc sęculo, non tamen necessitate absoluta, sed cõditionata prȩuidere poterimus. Est nãq; cœlum (quod Theologi quoq; nõ inficiãtur, vt Thomas de Vio Caietanus super psalmo. 104.) vehiculum diuinę virtutis, quo mediante motu, & lumine densitatũ, ac stellarum ipsius, tanq̃ secũdis causis, Deus cuncta hęc inferiora, & elementaria corpora ordinat, atq; disponit. Ex quo vultus huius sęculi subiecti sunt lationibus superioribus, vt omnis huiuśce mũdi virtus inde gubernetur, vt Philosop⁹, & Astrologus ęque attestãtur. Vnde agnita cœli dispositione, futura mũdi contingentia facile admodum erit pręcognoscere. Cum nãq; Deus cœlum sicut pellem extenderet, formans vniuersitatis librũ. Futura quoq; accidentia, quę vim naturę minime excedũt, in eodem mirifice descripsit. Vnde cœli enarrant gloriã Dei, & opera manuũ eius annũtiat firmamentũ. Et Deus fecit luminaria magna, vt vltra tẽporũ diuisionẽ, essent nobis in signa videlicet futuræ pestilentiæ, belli, penurię, pacis, & abũdantię, ac cæterorũ naturaliũ euentuũ. nec eis causalitatẽ attribuit Moses legislator, ne Iudei simplices à veri Dei cultu deuiarent, q̃d expositorũ aliq minime tacuerũt, vt Alphon'ũs Eps Abulensis, (neq; enim hoc de signis cœlestib⁹ intelligi potuit, quũ nõ luminaria, sed stellę cœlo affixę signa eiusdẽ efficiãt.) Noluit quoq; & filius Dei vnigenit⁹ tanq̃ verus homo libri ęternitatis eiusdẽ literis deesse, vt ea, quę hoĩs sunt, velut natiuitas, mortis aculeus, & alia plurima p figurã cœli significarent, quę tñ vim humanę naturę minime excedunt nõ ea quę soli potestati diuinę mere, ac libere subsunt. Nõ q̃ figura cœli causa esset q̃ Christus nasceret, sicuti neq; oracula prophetarũ causa fuere, q̃ Iesus pateretur, Sed potius (vt inquit Albertus in speculo) significatio fuerat, Immo & vero verius ipse erat cã quare modus admirã dę sue natiuitatis p cœlũ signaret. Verũ nos ne cõtra catholicorũ dicta, ac diuinã legẽ, cõtraq; verã ac naturalem Astronomiã in pnostieãdis futuris in hoc sæculo cõtingat sæpius aberrare, tria nosce oportet futurorũ euentuũ genera, Quorũ aliqua sunt primũ, quæ hñt cãm determinatam,

& infallibilem, vt motus cœli, ortus, & occasus signorum, coniunctiones planetarum, & luminarium, eclipses, & similia, in quibus est determinatio, & infallibilitas ex parte motoris, ac etiam omnis impedimenti remotio ex parte qualibet, nisi inquantum subiacent diuinæ voluntati, quæ tamen semper ordinate agit. Et de his vera, ac certa est astrologica scientia, atque ipsorum experta præcognitio. Quibus præcognitis, & eorum effectus facile innotescent, vt sunt generalia mundi huiusce accidentia, bella, fames, pestilentiæ, pax, abundantia, regnorum sectarumque mutationes, grandines, aerisque maximæ perturbationes, elementorum commotiones, terræ motus, & similia, quæ ex cœlesti influxu, atque elementorum commotione, quæ vi syderum aguntur, quotidie, vel de euo in æuum euenire concernimus. Quæ quoniam ab vniformi cœli motu inuariabiliter æque dependent, ni secus à prima causa secundum miraculosæ impediantur (vt prædiximus) peritissimus in his astronomus non longe a veritate aberrabit. Verum quæ potest Deus potestate absoluta, nunquam, vel raro fient, quia sequeretur, quod Deus faciat aliquid, & minus ordinate agat. Quum tamen omnia quæ sunt à Deo, ordinata sint, secundum apostolum. Neque in his ponendum est miraculum absque necessitate, vel nisi in re magna, vt in morte Christi solaris defectio, & Iosue necessitatis tempore Solis non naturalis retrogradatio. Secundo aliqua sunt futura contingentia, quæ causam habent indeterminatam, & fallibilem, sicut sunt operationes hominum pure, mere, & simpliciter voluntariæ, atque ideo non habent determinatam veritatem, neque determinatam falsitatem, vt philosophus inquit. Nam voluntas hominis indeterminata est, & ad vtrunque vertibilis, videlicet ad opposita, atque ideo fallibilis, quia etiam volenti aliquid perficere, multa occurrere possunt impedimenta. Et propterea quum sit anima ipsa hominis nobilior cœlo, nec possit illud, quod corporale est, in animam agere, quæ spiritualis est, Ideo non potest cœlum voluntatem humanam immutare, neque in eam, nisi indirecte inclinando agere. Et ideo talia non possunt astronomica, vel quacunque alia humana scia, sed quodammodo, exili coniectura perciri. Tertio aliqua sunt, quæ habent causam determinatam, sed aliqualiter fallibilem, vt ea quæ partim a voluntate hominis, partim a cœli influxu dependent. Et hoc quia cum homo naturam habeat bipartitam, vnam. s. cœlestem, & ethereum, videlicet animam intellectualem, alteram vero ex elementorum compagine propagatam, quod est corpus caducum, & mortale, ea propter eandem oportuit duobus agi principiis, cœli. s. influxu, & voluntate, & sic effectus, & operationes eiusdem variæ, & mistæ inueniuntur. De his igitur cum magis eædem corpori, quam animæ appropriatur, minusque voluntati subsunt hominis, vt bona fortunæ, corporis, & animæ habitudo, ac veluti sensus, & intellectus, sanitas, vel infirmitas, longus vel breuis vitæ terminus, & vt plurimum biothanata mors, quæ vix humana voluntate, & sapientia regi, vel moderari possunt. De his dico astronomus verum, ac rectum profert iudicium, non tamen vt de prioribus ita penitus infallibile, verumtamen sufficienti,

ac probabili coniectura fundatum. Cum enim cœlum ad hoc, vel ad illud humanum corpus alteret, atq; disponat, bonam'ue fortunã, vel malam homini inspiret: non poterit propria voluntate corpus proprium de insano sanum facere (de his loquor, quæ à natura sunt) nec poterit similiter bonam sibi fortunam in negociis humanis, ac dignitatibus, & honoribus appropriare, & sic de memoria, intellectu, longa ipsius vita, & de cæteris. Nec inficior tamen hominem penitus humana sapientia, ac prouidentia posse stellarum opus adiuuare, vel incuria, & malo regimine abbreuiare. Sed hoc raro & per accidens euenit. Quę vero humanę voluntati subiici, & ab eadem moderari vel corrigi possunt, licet sint corpori à cœli influxu naturaliter insitę, & propagatę, vt concupiscentia, & irascibilis, ex quo aliqui ad desideria voluptatum, aliqui ad iram, & vindictam, aliqui ad bonos mores philosophiam, virtutes, & temperantiam, ad fraudes aliqui, bella, & rapinas magis proni existunt. De his potest naturale iudicium proferri, ad quod cœlum naturaliter inclinat, atq; disponit, & sic naturali, atq; humana coniectura fundatum. Quum autem homo sit animal politicum, ipsumq; Deus intellectuali spiritu insigniuerit, atq; eundem cœlesti radio vultus sui, & rationis lumine illustrauerit, animamq; eidem liberam, ac voluntatem cum potestate arbitrii sui super humanas affectiones, ac syderum inclinationem donauerit, his mediantibus (præueniente diuino lumine) humani corporis affectiones, & passiones in diuinam, ac supernaturalem alteram naturam transferre, & commutare poterit. Vnde in his astronomorum, ac cæterarum humanarum scientiarum iudicium fallax, & inane. Quod de brutalibus hominibus, qui non ductu rationis, quin voluptatis affectu humanam naturam in irrationalem cõmutant, vt plurimum verax fiet. Quicquid igitur in libro hoc, vel quorũcunq; astrologorum iudicioꝝ dictis circa futura contingẽtia dictum, vel scriptum inueneris, non aliter, q̃ hic modo prędiximus, dictum puta. Quoniam nostra hæc est sẽtẽtia elemẽtaria corpora queq;, siue ex eisdem compacta a superioribus gubernari: cuncta tamen diuinæ potestati, atq; hominum actus, qui ab hac moderari possunt, humanæ subiici voluntati.

Et est planeta diurnus, ma/sculinus, moderate calidus & siccus. fortuna per aspectũ, infortuna per cõiunctionẽ corporalem. Cerebrum humanũ, medullam, neruos, ocu lum dextrum viri, ac sinistrũ mulieris tuetur. Croceũ rubeo mistũ co lorẽ tenens. Corpus solare terram centies sexagies sexies, & plus parum cõtinet. ☿ Mercurius galero caput opertum, atq; alas pedibus gestans haud dissimili characteris figura designatur. Planeta commistus, masculus cum masculis: fœmineus cum fœmininis, cum calidis calidus, cum humidis humidus, fortuna cum fortunis, maxime laudabili aspectu coniunctus, infortuna cum infortuniis, presertim eisdem aspectu malo vel corpore applicans. Secundum aliquos femora, vmbilicū, pecten, crura, neruos, & venas regit. iuxta alios (& melius) os, linguam, cogitatiuam, ac memoratiuam, manus quoq;, & crura possidet. Ex coloribus autem omne commistum, & varium. Magnitudo eius pars vna est de 32. millibus partibus terræ. Radii autem ipsius gradus septem. Cursum vero suum cum Sole, ac Venere conficit. Anni Mercurii maximi sunt. 460. maiores. 76. medii. 48. minores. 20.

☽ Luna (quæ vt plurimum cornicularis cernitur) pari, ac semicirculari forma signatur. Fœminina est, nocturna, naturaliter frigida, & humida, parum tamen calefacit, magis humectat. per quartas suas qualitatem, vt Sol in quartis, & anni temporibus quatuor commutat. Et est delatrix virtutum, & impressionū omnium aliorum planetarum, nam omnes influentię per orbem ipsius ad nos vltimo descendunt. Ex coloribus croceum habet. In homine cerebrum, & in mare sinistrum oculum, in fœmina dextrum, ac vuluam. In vtroq; stomachū, ventrē, atq; in omnibus sinistræ partis portionem elegit. Magnitudo lunaris globi est vna pars de. 39. partibus terrę. Radii vero ipsius graduū duodecim sunt. Annus autem siue mensis Lunæ peragratorius ab vno ad eundem zodiaci punctum, iuxta eiusdem medium, & ęqualem motum dierū est. 27. horis. 8. fere. Alias lunaris siue consecutorius mensis dierum. 29, cum dimidio, omissis minutiis, de quibus infra. Anni Lunę maximi sunt. 520. maiores. 108. medii. 66. & dimidium. minores vero. 25.

☊ Caput draconis veluti capiti caudam conuertens designatur (quorum vterq; ex intersectiōe linearum duarum Solis. s. ac Lunæ orbiū in cœlo describitur) cum bonis bonum est, cum malis malum. In coniunctione nanque bonorum bonitatem ipsorum adauget, sicuti in malorum coitu malitiam mali exaggerat.

☋ Cauda vero ipsius verso modo signata bonitatem boni, & malitiam mali diminuit. Et ideo bona cum malis, mala autem cum bonis decernitur.

¶ De amicitia & odio planetarum.

Aliç etiam sunt species inimicitię ratione oppositionis domoꝝ, & exalta tionum. Fortior aũt planetaꝝ amicitia est quã do planetę cõcordãt in natura, qualitate, substãtia, & ptãte. ¶ De coitu & aspectibus, seu radiationibus planetarum.

☌ Coniunctio siue congressus luminariũ, (quæ circulari figura nodo ali qualr cõnexa figurat) pfecta, seu partilis exhibeẽ, cũ planeta aliquis in eodẽ gradu alteri planetę, vel Soli p minuta. 16. ante, aut retro, tam p longitudinẽ, q̃ p latitudinẽ copulaẽ: & tũc dr̃ esse in corde solis, vel eidẽ vnit⁹, ab ĩde vero citra videlicet a gradu vno, añ vel post platica fertur cõiunctio, dũ. s. iuxta medietatẽ orbiũ, siue radioꝝ amboꝝ coeuntiũ, vel min⁹, vnus alteri adhęret. ✱ Sextilis,siue hexagona radiatio pari radiorũ numero designata, est quũ planetæ inter se distant per sextam zodiaci partẽ, videlicet per gradus 60. qui est aspectus mediocris dilectionis,& amoris, atq; ideo mediocriter bonus.

□ Quadratus siue tetragonus simili geometrica figura demõstratur, gradus tenet. 90. Aspectus odii, imperfectæ tamen inimicitiæ, idcirco mediocriter malus.

△ Trinus, siue trigonus haud dissimili charactere designatus tertiam circuli partem; videlicet gradus. 120. amplectitur, perfectæ amicitię,& amoris, nusq̃ in qualitate signorum ab inuicem discrepans.

☍ Oppositio, seu diametralis irradiatio, quę per circulos paruos inuicem oppositos figuratur, est quũ planetæ mutuo sese diametraliter opponunt, per mediã.f. circuli partẽ, qui sunt gradus. 180. propterea aspectus odii atq; apertę dissensionis, ac perfectæ inimicitiæ.

Applicatio autem dicitur quũ per gradus sex iuxta aliquorum sententiã, seu per medietatem radiorum vtriusque aspicientis, vel corpore coeuntis alteri adhærent. ¶ Figura radiationum omnium in Zodiaco.

Schema hoc omne continet radiationis exemplum a quouis Zodiaci signo perceptum. Similiter a sinistris, hoc est contra successionem signorum ♒ ♑ & ♐ eisdem aspectibus retrospicit. Quod non minus de reliquis coeli signis singulariter, atque exemplariter descriptum apparet. Signũ signo, & gradum gradui referendo. Et si nanque Stella quaelibet radium suũ tam luminis, quam virtutis occultae infinite, atque orbiculariter vbique diffundit, efficaciora tamen deprehensa sunt loca hęc quatuor, videlicet latus sexanguli, quadrati, trianguli, atque oppositus stellae situs eidem. ¶ De accidentibus planetarum, tum inter se, tum in semetipsis.

PRohibitio in primis est, quę aspectus prohibet planetarum, & con iunctiões, vel radios ipsorum impedit. Et hoc dupliciter corpore. s. vel aspectu. Corpus enim planetę aspectum alterius impedit, dum ppius planetę, q̃ ille qui aspicit fuerit, vel etiam dum pares æque fuerint gradus tam planetę aspicientis tertium, q̃ corpore applicãtis. Aliter planetę radii, dum propius tertio fuerint tam corporalem coniunctionē, q̃ aspectum longinquioris impedit.

Receptio planetarũ est, quando planeta iungitur domino domus, in qua est, vel exaltationis, aut aliarũ minorum dignitatũ essentialium. Et ipse similiter dñum aliquod habeat in prędicto loco in quo est. Verum qñ vnus est in dignitatibus alterius, & econuerso, melior est & perfectior receptio, quam esse possit, maxime ex trino, & sextili.

Redditus virtutis dicitur, quando planeta ex domo ppria, vel dignitate alia alteri iungit̃ planetæ cõbusto, aut sub radiis Solis, vel retrogrado existenti. Hic nãq; ppter debilitatẽ suam alteri respicienti virtutẽ reddit dño ipsius, quã retinere nõ potuit. Et si ambo fuerint in angulis, vel succedentibus, redditus iste pficuus erit. Similiter etiam si planeta alteri applicans in angulo fuerit, vtilis erit, licet alter in cadenti sit, dum tñ alterũ recipiat. Item dum ille qui reddit virtutem alteri in angulo fuerit, alter vero non, cum proficuo erit illi, non tamen econuerso, nisi cũ receptione (vt prędiximus) fiat. Verum si ambo cadentes fuerint, cũ detrimento redditus erit.

Translatio luminis, vel naturæ primo fit, quando separatur planeta leuis cursu à ponderoso, dehinc alteri iungatur, tunc primus transfert naturam secundi ad tertium. Item si leuis ponderosiori se, iungatur, & hic alii adhuc ponderosiori se, tunc medius hoc modo naturam primi ad tertium transfert.

Redditus luminis, si quando planetę duo inter se distantes tertio alicui ambo iungantur: tunc tertius iste amborum lumen colligit & proiicit ad eosdem, vel etiam ad loca quęlibet signorum zodiaci sextilis. s. trini vel quadrati, & diametralis radiationis, quibus in locis planeta alius existẽs duorum pdictorum lumen recipit, & tũc idem fere est quod translatio.

Pulsatio est, quando aliquis planeta per aspectũ iungatur domino signi, exaltationis, triplicitatis, termini, vel faciei signi illius in quo fuerit. Vel si leuis econuerso in aliqua dictarum dignitatum suarum fuerit, & planetam aspiciat nullam habentem dignitatem in loco in quo est. Tunc ille primo naturam mittit ad dñm suipsius signi. Hic secundo modo, ppriam leuis naturam ponderosiori, & peregrino mittit.

Refrenatio est quādo planeta alteri applicās corpore, vel aspectu, anteq̄ eidem coniungatur, fit retrogradus. In tali casu refrenatur, ne talis cōiunctio, vel aspectus compleatur.

Contrarietas fit quando planeta ponderosus in medio est duorū leuium. Et quando prior deberet ipsi medio coniungi, cui applicat, econuerso tertius leuis, qui ab eodem elongabatur, per retrogradationem medio copulatur, & transiens illum, alteri etiam priori coniungitur. Et sic dupliciter prioris coniunctio cum medio non tantum impeditur, sed etiam cum huic secundo congredi debuerit, tertio contrario modo compulatur.

Abscisio luminis eodem fere modo interuenit, quū tertius. s. priorem, & secundum per gradus aliquot in aliud signum transiens per retrogradationem medio huic, non priori tamen coniungitur. Alio modo etiam si fuerit planeta leuis petens coniunctionē ponderosi. Et hic ponderosioris aspectum, vel congressum ineat, anteq̄. s. prior ipsi coniungatur, tunc tertius lumen prioris a secundo abscindit, cuiusinodi congressum expectabat.

Frustratio itidem fere secūdo hoc modo, quo abscisio luminis fit, quū. s. prior a secundi congressu frustratur, dum secundus hic signum in quo fuerat exiens, & signum aliud iniens, planetę tertii radiis copulaē, prioris congressum postergans.

In exemplari themate Sol trinum Martis ad Venerem in eodem gradu corporaliter impedit. Verum ⚹ ☽ in secūdo ♉ gradu existentis cōiunctionem corporalem ☉ & ♀ prohibet. Recipiunt sese mutuo ♀ & ☽, at Venus combusta virtutem Lunæ reddit. Transfert Mercurius lumen ☉ ad ♀, postq̄ eidem cōiunctus, Venerem corporaliter petit, vel alio modo, dum ☉ a ☿ recedēs Veneri copulatur, tunc Sol Mercurii lumen ad ♀ transferet. nec minus lumen Solis Mars ad Saturnum secundo hoc modo transfert. Vel Martis lumē & Iouis Sol ipse colligit, & ad loca eadem met ipso ℞ reddit, & trāsfert. Contrarietas & luminis abscisio in ♀ ☉ & ☿ cernitur, si quando Venus retrograda vni, vel ambobus etiam iungatur.

¶ De his quę accidunt planetis cum Sole & Luna, & primo de combuſtione.

EX his quę ſpectant planetis quinque erga luminaria prima eſt coniunctio, de qua ſupra. Hinc eſt combuſtio, cuius quidem terminus in planeta quolibet per ſemidiametrũ Solis, videlicet gradus ſeptẽ cũ dimidio, & ſemidiametrũ orbis radiorũ planetę cuiuſuis aggregatum accipitur. & ſic in Luna gradus erunt tredecim cũ dimidio. In Venere & Mercurio gradus vndecim. In Marte gradus vndecim cũ dimidio. In Ioue, & Saturno gradus duodecim. Sic nanq; dum Soli appropinquant per gradus totidem ante, vel retro ꝓprie comburi dicuntur. Alii tamen dantur combuſtionis termini, qbus promiſſa adimplet planeta quilibet, vel non, in annis maxime vitę nati, quum fuerit alchocoden. Tres nãq; ſuperiores dum occidentales fuerint per gradus. 15, à Sole, ac poſtea dum Sol ab eis elongatus fuerit per gradus decem combuſti prorſus, dehinc vſq; ad. 15, ſub radiis eſſe dicuntur. Venus, & Mercu-

rius dum Soli per gradus septẽ appropinquãt, donec per gradus quꝙ trãseant, combusti sunt. infra. 12. sub radius. Luna per gradus. 12. ante & retro, vel saltem per gradus. 10. postea cõburitur. abinde supra sub radiis solis vsꝙ ad. 15. permanet. Et hęc cum Venere magis, q̃ planetę alii a sole comburitur.

Almugea planetę est, vt sit occidentalis a sole, & inter eos tot sint signa, quot sunt inter domum Solis, & planetę ipsius, vel sit occidentalis a Luna, & sint inter eos tot signa, quot supra.

Orientales dextri tres superiores dicuntur quum noctu ante Solem oriũtur, econtra in die occidunt.

Occidentales sinistri econuerso quum die post Solem oriunť, noctu occidunt. Et a coniunctione per gradus. 30. vsꝙ ad. 60. fortificanť in orientalitate sua. Et a retrogradatione per gradus totidem postea occidentales fortes fiunt, postea vtrinꝙ debilitantur.

Inferiores duo qñ separantur a Sole per directionem, & vespere post Solem occidunt, & Luna sit, occidẽtales dicunť. Venus & Mercurius retrogradi post coniunctionem, at Luna post oppositionem cum Sole orientalis dici solet.

De his quę accidunt in semetipsis est vacuitas cursus, quã do. s. separatur ab vno, & nulli iungiť, donec fuerit in illo signo.

Feralis, vel agrestis dicitur, quando planeta nullus signum aspicit, in quo ipse fuerit.

Peregrinus vbi nullã hẽt dignitatẽ. In suo haym, vt masculin⁹ & diurnus in die supra terrã, & in signo & gradu ẽt masculino, & econtra.

Ascendens in circulo suę augis, videlicet in superiori parte, dum per gradus. 90. ipsius augi applicat (queadmodum in Ephemeri cuiuslibet propriæ vniuscuiusꝙ auges describuntur) & ab auge itidem p gradus totidem descẽdens, minor quæ lumine, & magnitudine, & cursu diciť.

Ab opposito vero augis per gradus totidẽ dum ascendit, ac descendit, maior erit lumine, & magnitudine. Et qñ mouetur plus medio cursu, vel minus, dicitur auctus, vel diminutus cursu.

Et qñ transit nodum intersectionis deferentis cũ ecliptica, qui genhazar dicitur, septentrionalis, vel meridionalis ascendens vel descendens fit, quemadmodum in Ephemeri notatur. Quod in Luna per te hoc pacto per propriam tabulam, & canonem agnosces.

SIcuti in magnarum rerum inceptionibus (vt inquit Albertus in speculo) ex electione laudabilis horæ minime libertas arbitrij coercetur, sed potius electionem horæ contemnere arbitrij præcipitatio, non libertas existimatur. ita neque in paruis omnino contemnenda censetur, atque in his maxime, quæ ex naturali elementorũ cõplexione, ac syderũ cursu eueniũt. Vnde medici, qui in ęgritudinibus sanãdis, ac medicinis dãdis, (vt inquit Alexander de ales. ij. parte summæ qst. iij. ar. vj.) minime considerant motus corporum supercœlestium, aut ipsi nescientes, aut aromatarij, non Medici censendi sunt. Obseruare vero tempus in his quæ mere sub sunt libero arbitrio, vel quæ à nulla cœli ratione, vel elementarium rerum complexione, aut nulla temporis qualitate dependent, vanum, & superstitiosum omnino reputatur. vt ea quæ de bisextili anno, vel calendis mensium, ac feriarum, vel etiam de dierum Lunæ numero fatue prædicantur. Homo nanque duobus tegitur principijs (vt idem Albertus in suis mineralibus) natura. s. & voluntate. natura subiecta est syderibus, voluntas autẽ libera. Propterea (vt prædiximus) aliquæ sunt operationes, uel effectus pure corporales, quæ syderibus plane obediunt, tanq̃ secundis causis ad hæc, & ad alia à Deo cõstitutis, vt est sanitas, vel infirmitas, longa, vel breuis hoĩum vita. Aliæ sunt operationes mere, ac pure voluntariæ, quæ terminos astronomicæ potestatis excedunt, vt facere hoc, vel illud bonum, vel malum, vel aliquid ad vtrunque vertibile. Aliæ sunt partim corporales, partim voluntariæ, atque ideo mistæ. Vt facere iter, quod primũ ad voluntatem hominis pertinet, vel non facere. Quòd autem ex eo itinere bonum, vel malum corpori eueniat, vt damnum, lucrum, honor, vel dignitas, hoc ex cœlorum influxu dependet. Item quia si quis regem, vel aliquem alium aditurus, lætitiæ tempus obseruat, vt illum petitioni suæ facilem inueniat. Ita (quia constellatio aliqualiter disponit, & inclinat humanam voluntatem ad hoc vel aliquid agendum) in hoc quoque, & similibus electio horæ laudabilis (vt plurimum) præualebit.

¶ Radices & fundamenta electionum.

NOn eligas primo, nisi natiuitatem, vel reuolutionem, aut interrogationis horam illius noueris, cui electionem facere intendis: quia forte accipies ascendens inimicum, & contrarium radici natiuitatis, vel reuolutionis, ita q̃ dabis ei pro ascendente duodecimam, octauam, vel sextam suæ radicis: vel forte mouebis ei damnum vel malum, quod retrahere non poterunt fortunæ, quas ei collegisti, quia forsan ille fortunæ erunt inimicæ, & contrariæ suæ radici, siue illa infortuna, quam debilitasti in electione tua forte erit significatrix in radice, te hoc nesciente. Et sic

aliquis incipiet iter die infortunato,& malo, & libere lucrabitur. Et alius quidem nauim intrabit die electo,bono,& fortunato , & nunquam reuertetur ad locum suum, vel aliás impedietur,& rem amittet ,& alius tamen lucrabitur.Et hoc non accidit nisi propter discordantias natiuitatum suarum,nec proficit alteri exitus,quem fecerunt duo vna die,& hora.Potest igitur quis se adiuuare de electionibus,quando bonitas electionis adiuuat significatores radicis:qꝫ si iidem boni , vel mediocres fuerint , vel saltem non multum damnati,electio in hoc proficit , & ad bonum trahit. Quod si modo contrarium fuerit,non apparent electionum effectus.Vt si quis etiam pro suscipiendo filium idoneam ad hoc horam elegerit , & habuerit in natiuitate domum,& significatores filiorum damnatos , priuationem filiorum denotantes,non erit profectus ex hoc in electione laudabilis horæ:quia electio non tantũ valet qꝫ vel retrahere, vel effectũ cõtrariũ ꝑducere possit illius , quod planetæ in radice natiuitatis signãrũt.

¶ Aphorismi in electionibus operum.

QVando habueris natiuitatem,vel interrogationem,vel etiá anni reuolutionem,tunc debes aptare domum,ac significatorem natiuitatis vel interrogationis rei ipsius incipiendæ. Aliter fortunetur domus hora inceptionis rem ipsam significans,ac dominus eius,& similiter eiusdem rei significator.

¶ Aptetur etiam Ascendens dominus Ascendentis,& dominus domus ipsius. Et sit ascendens de natura simili,& conuenienti in qualitate & ratione rei incipiendæ,vt signa mobilia pro itinere,terrea,vel fixa pro plantationibus,& seminum iactu , atqꝫ pro litibus Martis signa,vel pro igne ignea & cætera. qꝫ si dominus ascẽdentis fuerit infortuna ponas eum aspicientem. Ascendens de trino vel sextili.

¶ Aptetur Luna primum,quia participationẽ habet in re oĩ , necnõ dñs domus eius. Quæ (vt plurimũ) abhorrenda est in ascendente ẽm Haly.

¶ Aptetur Sol sicut rex,qui (nisi sit in Leone,vel Ariete) in Ascẽdẽte, vel in domo rei malus est.

¶ Item planeta rem naturaliter significás, vt Venus nuptias , Iuppiter substantiam,& similiter de alijs.

¶ Itẽ locus cõiunctionis,vel ꝑuentionis ꝑcedẽtis electionẽ,& dñs eius.

¶ Decima domus sitr,necnõ dñs eius,& quartæ,qui finẽ rei attendit:dũ tũ quartã domũ aspicit:aliter nõ significat finẽ rei,sed dñs domus Lunæ, si Lunã aspexerit.sin aliter,planeta,cui primũ iũgitur Luna.post hũc dñs do.ʼ partis fortunæ,si hãc aspexerit.sin autẽ remanet significatio Lunæ, & dño domus eius principaliter,vel quarto à Luna signo,vbi tunc fuerit, & secundum aliquos domino quarti signi à loco partis fortunæ.

¶ Et si ꝑdicta oĩa adaptare non poteris,quę potes fortifica,& ad minus

apta signatorẽ rei, Ascẽdens, ascẽdentis dñm, & Lunã. q si fuerit infortu nata, fac eã cadere ab ascẽdente, & planetã impedientẽ Lunã pone dñm primæ, quia prima nõ impedit semetipsam, & sit ipse liber ab ifortunis. Etsi nõ põt poni c̃ñs primę, ponatur in. 10ª. vel. 11ª. vel. 5ª. q; si recipe ret Luna, frangeretur tota eiusdẽ malitia. similiter pone Iouem, aut Ve nerem in Ascendente, vel decima, aptãdo saltem dominum horæ, quia erit aliquod iuuamentum in re tua.

Caue in oĩbus ne sit dñs ascẽdẽtis retrogradus. nã licet oẽs alij significa tores sint boni, nõ tamen adimplebitur res, nisi cum maximo labore.

Caue ẽt ne luminaria sint in cõiũctione, vel oppõne, maxĩe cũ capite, vel cauda, neue horũ alterutrũ sit in prima, vel in loco rei, neq; cũ parte rei.

Caue etiam præ omnibus ne sit ascẽdens electionis sexta, vel octaua, vel duodecima natiuitatis, vel quæstionis.

Caueas insup quantũ poteris ne sint infortunæ in ascẽdẽte, aut in aliquo angulorũ, & maxĩe si fuerint dñi malorũ locorũ vz. 6. 8. ac. 12. domus.

Cauendum est etiam ne sit stella de natura malorum in ascendente, vel medio cœli, ne ue Luna sit in. 2. domo. 6. 8. vel. 12.

Insuper nec ponas partem fortunæ cadenteem in aliquo initio, vel fa cto, nec remotam ab aspectibus, vel coniunctione Lunæ, non curando in hoc de aspectu domini partis eiusdem. Quod si dominum ascenden tis cum parte eadem coniunctum, vel in aspectu eiusdem exhibueris, magnam in re tua vtilitatem augebis.

¶ Electiones in initiis rerum ex aspectibus Lunæ ad planetas ex Ioanne Monteregio.

Solis ☌ cum Luna res occultas, & consilia secreta perfice, quæ sciri nolue ris, in reliquis euitanda est.

Veneris ☌ cum ☽ duc vxorem, comæ ornentur, elegantia vestimenta induc, cum muliere concumbe. quod de ⚹ ac △ vehementius, de □ & ☍ remissius dictum intelligas.
Mercurii ☌ cum ☽ vel quocunque alio ipsorum aspectu expone scripturas, dic causas, calculum & rationes facito, mercare, eme, vende, nuntios, legatos, & oratores mitte, iter arripe.
Hic aduertēdum est, quod Luna cum in signo mobili fuerit, optimum est res inchoare, quarum finem in proximo quæris. Et cum in signo fixo fuerit, res longo tempore duraturas incipe. Et cum in signis communibus fuerit res non diu duraturas agito.
Si Luna stellis fixis fortunatis coierit, aspectus fortunatus fiet, & econuerso.
Luna capiti draconis coniuncta fortunata est, cum cauda infortunata.
Caput bonis bonitatem, malis malitiam adauget. Cauda cum eisdem coniuncta vtranque, bonitatem, s. vel malitiam minuit.

¶ Electio primæ domus in sanguinis emissione.

PHlebotomiæ tempus vnum est necessitatis, ex quo expectare dië & horam electã ex nimia forsan temporis mora periculosum est. alterum electionis est, dum non tantum minutionis ipsius tempus instat, quin expectare diem, & horam electam liceat, vt diem clarũ, & serenum iuxta medicorum normam, horam ẽt quæ matutinum tempus, & digestionem completam exquirit. Tu vero ante omnia ad diem pro incisione venæ electum construe cœlestem figuram, in qua collocabis Lunam, & dominum ascendentis in signis igneis, aut aereis præter ♊ fortunatos, id est a maleuolis Saturni. ♄. & Martis ♂ □ aut ☍ aspectu nequaquam affectos. Lunam præterea, & dominum ascendentis per signa, in quibus dignitatem habent, decurrere faustum est. Constitue etiam bonam fortunam in cœli medio, aut aspicientem Lunam, vel dominum orientis. Cauebis præcipue ne dominus octauæ domus cũ Luna, aut domino ascendentis commisceatur, quem etiam ab angulis reiicere laudabile est. Fuge quo ad fieri potest ne Luna sit in ascendente, & ne ipsa, aut dominus ascẽdentis domicilium quartum, aut octauum possideat. Tandem in his fuge Martem, & abhorresce Saturnum, Lunamq; cum Ioue præcipue, ac Sole Venere, & Mercurio in signis idoneis, ipsorumq; felicibus radiationibus affectam (vt infra) decurrentem obserua.

¶ Quadraturæ Lunæ pro ætate hominum in sanguinis diminutione eligendæ.

A coniunctione in quadraturam primam luna apta est iuuenibus.
A prima quarta vsq; in oppositionem electa iuuenibus, & virilibus.
Ab oppositione in secundam quadraturam bona virilibus, & senibus.
A secunda quarta vsq; ad coitum idonea est senibus.

¶ Signa idonea iuxta complexionem hominum.

Phlegmaticis prosunt signa hæc ignea	Aries	præter cephalicã, & venas capitis.
	Sagittarius	præter coxas.
Melancholicis hæc aerea signa	Libræ,	prima medietas, præter nates.
	Aquarius	præter tibias, & crura.
Cholericis signa aquea	Cancer	ꝑter pulmaticã, & venas pectoris.
	Scorpii	secunda medietas præter verenda.
	Pisces	præter pedes, aut zophenas.

Sanguineis bona & mediocria signa quælibet apta sunt.
Gemini vero Leo, Libræ vltima medietas, primiq;. 12. gradus ♏ necnõ signa terrea, videlicet ♉ ♍ ♑ minutionem sanguinis prohibent.

Quartus ☽	Sole, Saturno, Marte	prohibet per horas, 12. ante & post.

Trinus ☽ cum	Ioue, Venere	felicissimus.

Oppositio ☽	Ioue, Venere	bona.

Præcaue tamen ne membrum aliquod ferro aut igne tangas, dum Luna, vel dominus ascendentis in signo fuerit, cuius est membrum illud.

¶ Electio propharmacis, vel purgatorijs, aut laxatiuis medicaminibus sumendis.

TEmpora vsui medicinæ electa (præsupposito congruenti exhibitionis tempore veris, vel autumni magis quàm æstatis, & hyemis, exclusis etiã frigidissimis, calidissimisq; diebus iuxta Medicorum normã, vt ante canis vtriusq; exortum, vel per dies aliquot postea, si ue etiã circa ipsius matutinũ occubitum, quãdo molestæ sunt purgationes, & medicamentorum vsus) in primis iuxta Astrologorum normam per motũ Lunę in signis maxime aquaticis exploranda sunt, videlicet Cancer, Scorpio, & Pisces, adhibitis planetarum radiationibus virtutem corporis expulsiuam principaliter corroborantibus, vt hic infra, videlicet.

☽ per cancrũ in aspectu trino, vel sextili decurrẽte cum	Venere confortatur virtus expulsiua pro cholera euacuanda. Sole aut Marte adiuuatur expulsiua virtus pro phlegmate euacuando. Ioue adiuuatur expulsiua pro melancholia purganda.	℥ cũ electuario.
☽ in Scorpione in trino vel sextili cum	Venere cõfortatur expulsiua pro cholera euacuanda. Sole aut Marte adiuuatur expulsiua pro phlegmate euacuando. Ioue expulsiua pro melancholia purganda.	℥ cum potione.
☽ in signo piscium in trino, aut sextili cum	Venere confortatur solutiua virtus pro cholera euacuanda. Sole aut Marte adiuuatur expulsiua pro phlegmate euacuando. Ioue iuuatur expulsiua pro melancholia purganda.	℥ cum pilulis

Luna etenim in prædictis signis (vel vbi aliquod saltẽ ex eis ascẽdẽs aspiciat) ac etiam in vltima medietate Libræ, & Aquario existens (minus tñ) expulsiuam adiuuat, qñ. s. Solis, Martis, aut Veneris felicibus radijs illustrãt, quæ si fuerit cursu vacua in signis ipsis, mediocriter aget, fortius tamẽ planetis præmissis in forti ex cœlestibus domicilio collocatis, vel eisdem electionis horæ dominantibus, ac signa in quibus dignitatem habent peragrantibus.

Cauendum est tamen præcipue ne Luna ruminantia signa decurrat, quę sunt Aries, Taurus, & Capricornus. nec sit ascendēs Leo ne ue Luna applicet aut per corpus, aut per aspectum planetæ retrogrado, quia infirmus facile medicinam euomet, aut alias læsiones incurret.
Fuge aspectum Lunæ ad ambo infortunia Saturni maxime, etiam △ vel ✱ (ni secus natiuitati præfuerint) cõiunctionem vero amborũ □ vel ☍ penitus abhorrebis, simile planetarum dominium in horis diei (ni ra dicitus influerent) euitando.
Cauendum est etiam ne Iouis stella Lunæ corporaliter iungatur, quia iuxta sapientum dicta, naturam hominis fortificando, medicinæ operationem, & effectum prohibet.

¶ Electio medicaminis per signa cœli in membris humani corporis. Et est commune etiam & generale ad prædicta.

SIcut se habent planetę in humoribus nostri corporis euacuãdis, quorum fortitudo euitanda est in humore sibi simili, vt in colera Mars, quæ per Venerem euacuatur, & in melãcholia Saturnus, quæ per Iouis influentiam calidi, & humidi euanescit, econtra de signis quibuslibet humani corporis dominantibus contrarium obseruatur. nam si infirmitas in capite fuerit, Aries, qui respicit caput, in prima domo liber ab infortunis, vel Luna in eodem signo aptetur (quod tamen per pharmaci, vel vnctionis modum, non chirurgice cũ ferro, vel igne dictum intelligas) similiter Mars dominus signi eiusdem fortunetur. Inquit insuper Messahala. Aspice in quoloco corporis sit ifirmitas. & si fuerit in capite, gula, humeris, brachiis, aut manibus, incipies operari Luna existēte in Ariete, Tauro, vel Geminis, quæ est pars superior corporis, & si fuerit in pectore dorso, vel ventre vel vmbilico, cura eam cũ Luna fuerit in Cancro Leone, seu Virgine, quę est pars in medio corporis. & sic de alijs partibus corporis. Quod si infirmitas erit in toto corpore, pone horoscopũ signum Libræ, quod sit fortunatum sine infectione malorum. & similiter dominus eius videlicet Venus. Sed si curare volueris antiquã ægritudinem, facq; Luna sit in Tauro, vel in eiusdem triplicitate. In recentibus autē morbis eligatur Cancer, Scorpio, & Pisces præsertim. Adhuc omnis ægritudo, quæ fuerit à capite vsq; ad pectinē curatur Luna vertente ab angulo terræ vsq; ad medium cœli. sed si fuerit à pectine vsq; ad pedes, curam hanc elige Luna exīte à medio cœli vsq; ad angulũ terrę. In oib⁹ istis sit Luna aucta numero (si fieri põt) iũctaq; fortunis. Vel saltē Iouē pone in sexta. Cauendũ est in omni cura ne Luna sit in oppositione dñi sextæ, vel octauæ, etiã si fuerit fortuna. q si fuerit in eiusdē sextili, vel trino, nõ vitiat. similiter octauę d ĩs ab angulis penitus, & signatorũ aspectibus reijciat. Caue etiam in omni morbo, ne Luna sit in horoscopo, nec etiam domi

cilium quartum, vel octauum possideat.

Item si splen purgare volueris, videas ne Saturnus in cœlo fortis sit, sed purgabis hora Iouis, hunc ipsum fortunando, & fortificādo in hora electionis proponendæ.

Similiter Hepar ne purgabis hora Iouis, ipso fortificato in cœlo, sed sub dominio Saturni.

Cor etiam, ne purgabis hora Solis laxatiuo, vel purgatiuo medicamine. dare autem cordialem, vel confortatiuam bonum est cum Sol fuerit in decima, vel horoscopo, maxime ascendente signo Leonis.

Pulmonem in hora Mercurij, Fel & renes hora Martis, testiculos hora Veneris, demum cerebrū ipsum hora Lunæ nequaq̄ purgabis, sed sub dominio contrariorum planetarū in qualitatibus euacuabis, ascendente tamē signo membro illi symbolum, vel virtutem influente, vel Luna fortunata signum ipsum possidente.

Si volueris virtutes reliquas humani corporis (absoluta expulsiua) adiuuar, veluti attractiuam, quæ per Solem viget in caliditate, & siccitate, Fiat hoc Luna existente in signo igneo, vt ♈ et ♐ excepto ♌.

Si digestiuam, quam ♃ gubernat, in signis aereis ♊ ♎ ♒ accipiendo solummodo primam Libræ medietatem.

Si retentiuam quam ♄ gubernat, Luna sit in ♉ aut ♍.

Quod si Lunam in talibus signis expectare non potes, signū pone in horoscopo ex prædictis, uirtuti illi, quam corroborare desideras, opportunum, simile huic quoq; planetā ex pdictis in forti cœli loco collocādo.

¶ In electione itinerum per terram non pertinentium ad bella.

Conuenit vnicuiq; hoi ne incipiat iter proficuū sibi, nisi secūdū natiuitatem, & secundum reuolutionem anni sui, vel secundū ascendens qui ꝛ stionis suæ, si non habuerit horam natiuitatis suę, licet alia's electio bona, & laudabilis non noceat sibi. Et secundum hoc apta Lunam, & ascendens, tertium quoq; signum radicis illius, & eorum omnium dominos. Et si iter fuerit ad regem, pone decimā natiuitatis ascēdens & si fuerit pro mercantia pone secūdam radicis ascendens hora exitus sui ad iter faciendum. Et sic de singulis. Aliter si fuerit iter tuum per terram, pone signum terreum mobile vel commune in horoscopo, dum non poteris iter tuum differre, ad minus fortunando Lunam, & dominum horæ, & pone eandem in. 1 0. vel. 5. Et sit crescens lumine, & numero, & ab infortunis libera aspiciens ascendens, vel dominum eius. Et caue ne sit Luna in domo. 1ª. 2ª. 4ª. 6ª. nec in. 12ª.

Item Mercurius sit euasus a combustione, & ab infortunis liber maxime in itineribus pro vendendo vel emendo merces.

Item dominus ascendentis non sit combustus, nec retrogradus, nec in/

fortunatus, sed in bono figuræ loco. Et fit in ascendente fortuna vel in aliquo angulorum.

Item caue à coniunctione malorum □ et ☍ ad Lunam, quia plus eidem nocumenti afferunt, q̃ si ascendens aspiciant, quia Luna propriè significationem habet super omne rei cuiuslꝫ initium, maxime in itineribus.

Nec malum tamen tm̃ facit Saturnus itinerantibus per terram, q̃ qui per aquam ambulant, nec Mars per aquam quantum per terram. quin Saturnus fortunatus ex laudabili aspectu ad Lunam itinerantibus per terram proficit, sicuti nec Mars per aquam damnificat.

Differēdũ est iter, q̃diu Luna fuerit ĩ vltima, vel ẽt in secũda facie Libræ. Luna in signo bono, vel mediocri cõiuncta Ioui, vel Veneri per corpus, vel per △ aut ✶ melius est q̃ possit esse.

Aliter fac eam cadere ab ascendente (dum infortunata fuerit) ascendens vero & dominum ipsius, dominum horæ, ac planetã significantem rem illam, pro qua vadit viator, præ omnibus fortunandos elige.

Et scias q̃ Ascẽdens est significator loci, a quo separatur, qui facit iter. & septima est significatrix terræ, ad quã vadit decia viæ, vel itineris. Et quarta significatrix est itineris in reditu ad domũ. vnde ex istorũ locorũ melioratus fuerit, bonitatẽ significat ẽm significationẽ sui ipsius. Et quis eorum damnatus fuerit, damnum in suo significato indicat.

ℭ In itineribus particularibus & primo ad regem.

SI volueris ire ad regem, vel ducẽ, aut principem, iũgatur Luna Soli, vel saltẽ dño decimæ de trino, vel sextili aspectu, & si fuerit cum receptione, melius erit, sitq; Sol in bono loco. s. i primo, vel decimo, vel vndecimo, quo dñ fuerit cadẽs, nullũ habebis bonũ. Et si fuerit in septima vel qnta, vel ĩ quarta, sigñat modicũ boni, vel cũ magno, & lõgo labore.

Caue in hoc ne ponas Lunã in Aquario, vel in signo Piscium. Alias cum rege moraturus, qualecunq; conueniens ascendens elegeris, pone Iouẽ in eo, & fac eum iungi cum domino decimę ex trino, vel sextili aspectu, vel etiã ex quarto cum receptione, vel saltem pone Iouem in nona, qui vtrolibet sit saluus, & liber ab infortunis. Et vitabis eũ ponere in quarta domo. Et aspiciat ipsum Luna de decimo, si fuerit Iuppiter i primo, vel de septimo, si idem fuerit in nono. nec sint tamẽ in sexto, vel duodecimo abinuicẽ signo. Et si nõ poteris hoc facere, testificetur Venus Ioui de primo, septimo, decimo, vel quarto, cũ receptione, vel sine, vel à sexto, vel tertio cũ receptione. Caue à ♄ et ♂ ne sint in aliquo angulorũ, et ne Luna sit impedita à malis, vel à cõbustione, vel cũ cauda draconis.

Quòd si iter fuerit ad Antistites, religiosos, nobiles, iudices, vel legũ doctores, pone Lunã iunctã Ioui p corpus, vel p aspectũ △ vel ✶ vel saltẽ per □ cũ receptiõe ex aliquo angulorũ vel alio bono loco ab Ascẽdẽte,

Etsi volueris ad alias personas iter arripere, pro senibus, ignobilibus, vel austeris hominibus elige Saturnum, pro præpositis armorū Martem, cauendo ab ipsorum coniunctione, vel □ aut ☍ ad Lunam. Et sint in suc cedētibus angulorum liberi ab infortunijs. Et planeta cui primum iungitur Luna sit saluus ab omni impedimento, quia quando planeta cui applicat Luna, vel qui aspicit ascendens (maxime si fuerit dominus septimæ) infortunatus, retrogradus, vel tardi motus fuerit, significat duritiam, & pœnam ex illo itinere. Pro muliere autem apta Venerem, quæ masculinum signum cum applicatione ipsius ad Lunā possideat. Prędictis quoq; modis omnibus pro scriptoribus, & mercatoribus, aut sapientibus viris applices Lunam Mercurio.

¶ In itineribus per aquam.

Scito φ radices itinerum per aquam iuxta Abenragelem sunt quinq;, quarū prima est Ascendens, sub quo incepta fuit nauis illa. Secunda hora qua emitur nauis. Tertia est hora, qua ponitur in aquam, & ista est fortis radix. Quarta hora qua intrat homo nauim. Quinta radix multū fortis est, quando mouetur nauis in itinere primum. Et hæ omnes radices obseruandæ sunt. Maxime autē ne moueatur à littore nauis illa in hora Saturni: Et ne Luna Scorpij signum decurrat, & præcipue etiam à præmissis Lunæ impedimentis, & alijs de quibus supra φcauendū erit.

¶ Electio in his quæ opere alchimico, vel alia sper alembicum, et ignem fiunt.

Aspice in hoc vt sit Luna in signis cōmunibus, salua ab infortunis, & ascendens similiter sit signum cōmune, & eius dominus liber sit ab omnibus impedimentis. Et apta, & conforta planetam significantē materiam illam, quam operari volueris, sub dominio etiā horæ ipsius, vt Saturnum pro plumbo, & horam Saturni, Solem pro auro, & horam ipsius, Lunam pro argento, & sic de singulis.

¶ Electio in plantandis arboribus.

Plantaturus arbores, vel vineas, elige pro ascendente signa fixa, potissime autem Lunam Taurum cum Venere decurrentem, vel ab eadē aspectu aliquo affectam. Et si non poteris habere Lunam in Tauro, pone eam in Aquario. Et si non in Aquario, in Leone, dūmodo in hoc ab aliquo planeta de signo aquatico ex aspectu aliquo aspiciatur. demum post Leonem in signo Piscium, vel Virginis Lunam ipsam statuas. sed omnibus alijs prefere̊dus est Taurus, post ea Aquarius, & sic de reliquis vt supra. Saturni sydus in prima sit directus, vel vndecima, quinta, vel secunda in aliqua dignitatum ipsius. Et si non poteris eum ponere in prima domo, pone ibi Iouem aspicientem Saturnum vel vbicunq; fuerit Iuppiter, fac eum aspicere Saturnū aspectu amicitiæ, & sit ille in loco,

in quo habeat potestatem aliquam. Et si neuter illorum poterit poni in primo, pone ibi Lunam, vel pone eam in decima, vel vndecima, vel saltem in quinta, vel tertia. Et nunquam pona seam impeditam in plantationibus, vel seminationibus. Et quod modo dictum fuit de signis fixis cum reliquis, id etiam de ascendenti hora plantationis, vel foueæ ipsius excauatione accommodandum curabis. Item dominum domus Lunæ, partem fortunæ, & domum exaltationis ascendentis signi, magis quã dominũ domus, si potes, fortificare non obliuiscaris. Et caue ne des Marti partem aliquam in prædictis, neq; in seminum iactu, & fac Lunam cadere ab eodem. Item optimũ erit si dominus domus Lunæ aspiciat eam ex signo aquatico. Et si non fuerit ascendens signum fixum, sint dominus ascendentis, & Luna orientales, & ascendentes ad augem suã, vel saltem alter eorum: quia cito crescet arbor illa. Si vero fuerint ascẽdentes ad longitudinem longiorem, & non fuerint orientales, licet cito crescet, sero tamen fructificabit. Quod si econtra planetis eidem accedent, vtrũlibet scilicet vel alterum eorum, contrario modo eueniet. Et si prædicta singula adaptare nõ poteris, nec signa fixa significatoribus exhibere, signa communia adhibe, Lunam ad minus in Tauro, vel in vltima parte Sagittarii cum Ioue, præterquam in opposito eiusdem, liberam, & nõ impeditã in bono, ac forti thematis situ collocabis. quod nec minus hoc in Ioue, vel etiam parte fortunæ (si potes) obseruari consulitur.

¶ Horam eligere in seminum iactu, quæ eodem anno, vel sequenti fructificare intendimus.

PRæ omnibus Ascendens sit mobile, vel commune signum ad minus, & dominus ascendentis, & Luna similiter in signo mobili, vel communi, terreo, vel sementum, quæ si fuerit in Ariete, oportet eandem aspici à planeta Ioue maxime, vel Venere signum aquaticum possidente. Cancer ex prædictis, Capricornus, & Virgo probatur, ac etiã vltima medietas Sagittarij, & Pisces etiam laudantur. Sit tamen Luna auctalumine, & numero, quia aliter minuetur illud semen. Et sit libera à malis, & dominus ascendentis similiter, & dominus domus eius. Vltimo si nõ potes adaptare omnia, pone Lunã in Virgine liberam ab omni impedimento. Et aptasti horam seminandi.

Scias etiam q; ex signis fixis, Taurus laudatur, sed rarificat semen. Vnde oportet q; proiciatur plus de semine, quã in consuetum sit.

¶ In acquirendo amore, & amicitia.

QValecunq; sit ascendentis signum ex fixis vel cõmunibus saltem, idipsum fortunabis ex laudabili aspectu dñi sui, qui sit receptus

à domino vndecimæ, vel ipse ascendentis dominus in vndecima reperiatur, Veneremq; aspiciat, & similiter vndecimæ dominus Veneri iungatur. Pone Lunam mundam, & liberam à malis, & iunctam planetæ significanti personam illam, vt Saturno pro senibus, Ioui pro religiosis, Marti pro militibus Soli pro regibus, & magnatibus, Veneri pro mulieribus, & Mercurio pro mercatoribus, & scribanis (vt prædiximus in capitulo de itineribus particularibus.) Et ambo similiter sint salui & liberi, & in bono loco constituti. Sitq; Luna in vndecima pro amico acquirendo, vel iuncta domino vndecimæ, uel Ioui, aut Veneri cum receptione, vel saltem in domibus, exaltationibus, aut duabus saltem ex minoribus dignitatibus, libera, fortis, & aucta lumine, & numero, aspiciens saltem dominum domus in qua fuerit. Si vero amicitiam petieris, vt in re aliqua lucreris, pone Lunam in domo significante rem illam, vt in octaua pro hereditate, in sexta pro animalibus paruis, in duodecima pro maioribus, fortem scilicet, & receptam à domino domus, vel exaltationis signi in quo fuerit, qui non sit diuersus, vel contrarius rei ipsi, quam quæris. Similiter pars fortunæ in ipsamet domo cum Luna reperiatur, nec sit Mercurius impeditus, vel mali esse (nisi forte receptus fuerit) nam tunc petitionem cum difficultate tamen & duritia adimplebit.

¶ Dominum anni secundum Bonatum ex figura introitus Solis in Arietem reperire.

Considera primũ quis planetarum sit dominus ascēdentis, qui si fuerit tribus gradibus ante lineā anguli ipsius, vel quatuor postea, ipse erit dominus anni, & significator esse vulgi, dũ tamen non sit retrogradus, aut cõbustus. qui si sic fuerit, quęrẽdus est exaltationis signi eiusdem dominus. qui si ita male dispositus fuerit, vel alibi, q̃ prędiximus, situatus, & sic non poterit esse dñs anni illius, tunc si reuolutio diurna fuerit, quęrendũ est dñium a Sole, vel a Luna, si fuerit in nocte, quoniã luminare cuius fuerit autoritas, si habuerit aliquam dignitatē in ascēdente, & fuerit in aliquo angulorum, erit dominus anni. Quod si iterũ luminare illud non poterit esse dñs anni, quęre tunc dominatorem a domino termini ascendentis signi, deinde a dño triplicitatis, demum a domino saltem faciei. Quod si non poteris habere significatorem ab ascendente, vel a luminari temporis, tunc secundo quęre dñatorē anni a decima per modum iam dictum. qui si ita (vt prędiximus) dispositꝰ fuerit, vel saltem decimę gradum (vt supra) quocũq; aspectu, pręterq̃ opposito, aspexerit, ipse tam super regem (qui decimę dñs fuerit) q̃ super vulgum, ac populum significationē habebit. qui si nõ potuerit pro significatore haberi, tertio dñium quęre a domio septimę, quarto a domino quartę domus, quinto a domino vndecimę, sexto a dño nonę, septimo a domino quintę, octauo a domino tertię, incipiendo semp a domino domus, deinde a domino exaltationis, postmodum a luminari cuius fuerit autoritas, deinde a dño termini, demũ a dño triplicitatis, vel saltem a domino faciei. Et si aliquis ex prędictis planetis aspexerit aliquam ex domibus nominatis, maxime a trino, vel sextili aspectu duobus gradibus antea, vel tribus postea, dum habuerit ibi aliquã dignitatem, ipse erit dñs anni, postq̃ per alia prędicta non inueneris aliũ. Et si fuerit ascendens similiter domus, vel exaltatio alicuius luminaris, & ipsum aspexerit ascēdens prędicto modo, vel saltem fuerit in secũdo ab ascendente, maxime Sol in die, & Luna in nocte, ipse erit dñs anni. Item aspice dñm ascendentis, aut exaltationis. ꝙ si luminare cuius fuerit autoritas, fuerit in domo alterꝰ illorum, & aspexerit eũ a trino, vel sextili, nec fuerit cadēs ab ascēdēte, sed fuerit in bono ac forti loco, ipse erit dñs anni. Et si nullus planetarũ fuerit sic dispositꝰ, cõsidera qs eoꝝ fuerit fortior, & maiora testimõia habuerit ĩ figura illa, vʒ in locis pdictis, & da illi dñium sup alios, faciẽdo almutē ipm, ac dñium diei, & horę in significationibus pticipes. Et per illos iudica principaliter statum mundi, vel nati, vel alterius rei, sicut etiam per diuisorem. i. dñm ter-

mini, ad quam peruenit diuiſio, vel directio, & per dñm ſimilr radiorũ diuiſionis participem. ſ. vel receptorem, ac dominũ ſigni profectionis. Quo'dſi aſcendens reuolutionis anni fuerit ſignum fixum, pro anno integro ſufficit. Si cõe, figuram aliam dirige, cum Sol libram ingredi/tur. Si mobile fuerit, ſitus cœli variandus erit, dum Sol ſigna tropica quęlibet iniit.

¶ Sequuntur chronocatores, ſiue temporales dominatores in reuolu/tionibus natiuitatũ. Et primo de domino anni ex parte applicationis ſigni, & domino radiorum.

¶ De Diuisione anni, quem Arabes Algebuthat vocant, reperiẽda.

Ascensionibus obliquis ascẽdentis gradus hora natalis exortus acceptis, gradus totidem adiicito, quotus annorum numerus perfecto nato pertransiit. quorum modo graduum ac minutorum congeriem (si qua sunt) in tabula ascensionũ quęre polaribus gradibus loci natiuitatis ꝑpositę inseruienti. atq; illico sinistrorsum in prima zodiaci linea gradum offendes (exhibita ꝑportionali norma minutorum vltra gradus integros ascensionis prędictę) ad quem zodiaci gradum directio reuolutionis hora deuoluať. Cuiusmodi loci termino planeta prędominans dispositor, seu diuisor anni illius appellať. Qui teste (Haly) potens est in nato, vt sciatur de quibus magisteriis se intromittet natus anno ipso, & si bonis fortunę, vel paupertate grauabitur. Quod si fuerint radii alicuius planetę in termino illo corpore, vel aspectu locati, tunc planeta ille particeps, seu receptor domini loci ipsius efficieť. Similiter quoties directio eadem ad corpus, vel radios infortunę peruenerit, tunc nato infirmitas in corpore, vel infortuniũ eueniet, secũdũ naturam infortunę illius.

Almutem vero idest figuræ cœli prædominans, ipse est planetis cęteris pluris dignitatis, & fortitudinis in ascendente in locis duobus luminarium, atq; in loco partis fortunæ, in loco quoq; coniunctionis, vel pręuentionis quę natiuitatem, reuolutionem, vel figuram cœli aliam præuenit. Collectis nanq; prędictorũ omnium virtutibus ex tabula fortitudinum essentialium, q̃ plures habuerit in locis prędictis, vel alio dato cœli punctum planeta hic vincens, & prędominans habebitur, siue hunc ipsum locum aspexerit, vel non. Quod si pares duo, vel plures in dignitate fuerint, & alter locum ipsum aspexerit, vel in angulo fortior, vel in suo haym, vel melioris esse cũ Sole, aut in ꝑdicto loco ꝑ aliquo corporaliter reperiatur, alterum ęqualem in dignitate pręcellet.

¶ De coniunctionibus magnis planetarum.

IN annuis natorum reuolutionibus coniunctiones magnæ etiam considerandæ sunt, quæ homines ad diuersa accidentia, moresq; animi generaliter inclinant. Horum maxima est coniunctio Saturni, & Iouis in principio Arietis, quę in. 960. annis fit. Secunda autem amborũ coniunctio est in initio vniuscuiusq; triplicatis in annis videlicet. 240. Tertia cõiunctio est Saturni, & Martis in initio Cancri, quę quolibet 30. vel circiter fit. Quarta est cõiunctio Iouis, & Saturni in vnoquoq; signo eiusdẽ triplicitatis. Quinta est introitus Solis in ęquinoctii vernalis punctũ, vsq; in capite Arietis anno quouis fit. Vñ astrologi anni initiũ sumunt. Sexta est coniunctio luminariũ in menstruis lunaribus coniunctionibus. Et scias ꝙ q̃n dicitur ascendens coniunctio

nis, in reuolutionibus annorũ mũdi, ſignũ ipſum ſignificatur, quod hora introitus Solis in primũ Arietis punctũ aſcendit. Quorꝫ omniũ ſignificata, & apoteleſmata in libris iudiciorꝫ exquire.

¶ Tractatus

INter cæteras Astronomiæ partes, quæ in pronosticandis futuris versatur, difficilis, ac difficillima, pene habet certa futuræ aereę qualitatis præcognitio, cum non ab vno tantum dependeat principio, quemadmodum natiuitatis, reuolutionis, aut interrogationis iudicium, verũ à pluribus, vt ab ascendente coniunctionis, vel preuentionis in reuolutionibus annorum, quartarum anni, congressuum luminarium, tetragonum, atq; oppositionum, & ingressuum signorum, & propterea varios, atq; diuersos sortiatur effectus, quos etiam ab ortu, & occasu stellarum, nec minus, quã ex prædictis studiosa nouit antiquitas. Adde q; caloris nimia, frigorisue accessio aut nubes prohibet, aut diuidit, aut cito dissoluit. Ex quo in eadem regione æstate hic pluit, illic serenitas. Atq; frigidissimis temporibus, vt calidissimis etiam, parum, vel raro pluit. Ad quod etiam accedit varia regionum dispositio, ac situs, vt septentrionalis, meridiana, conuallis, campestris, ac montuosa. Vnde calidissimis, ac frigidissimis, siccos, vel humidos ventorum afflatus, hic niues, & glacies, illic æstus intensos sub eodem hemisperio, nec diuerso fere tempore, vel loci interstitio adesse concernimus. Cum igitur prædictorum effectuum bipartitæ, vel etiam tripartitæ sint causæ, quas nouit vniuersorum philosophantium schola, in his oportet iudicium proferenti multas adhibere considerationes. Non enim constellatio eadem, sub qua plures nati sunt, omnes reges facit, vel omnes albos, cum alicubi, vt in Aethiopia, omnes nigri sint, quæ omnia non tantum secundum virtutem, & qualitatem agentis, sed etiam secundum dispositionem suppositi intelligenda sunt. Sic erunt igitur & Astrologorum dicta, & cœlorum apotelesmata in elementaris corporis dispositione ponderanda. Quæ quoniam aeris dispositio ex ui cœli ac syderum influxu primo, ac principaliter consistit, ac reliqua prædictorum accidentium causæ tanquam secundariæ supponuntur. Hæc propterea ex multorum Astrologorum dictis breuiter exponentur, quorũ, nec præmissorũ minus qualitate perspecta, nõ longe multũ à veritate aberrabis.

¶ Quæ ex Hali dictis, Omar, & Albumasaris sententia colliguntur.

ACcidentia & qualitates aeris in anno dignoscuntur ab ascendente coniunctionis, vel preuentionis Solis, & Lunæ, quę fuerit ante introitum Solis in Arietem, & à loco luminarium, in figura, & à locis similiter planetarum. Vnde si Saturnum inueneris in aliquo angulorum ab ascendente, vel etiam à domino ipsius, firmum in eodem loco, ac fortem, maxime in medio cœli, & aliqua dignitatum suarum, in tempore caloris, minuit calorem, & in tempore frigoris facit magnum frigus. Et si remo-

tus fuerit ab angulis, non multum diuersificabit annum in qualitate sua, nisi forte dum venerit ad angulos ascendentis. Et quando in anni initio fuerit in angulo a' domino ascendētis, videlicet in. 4. 7. &. 10. ab eodem minor, & debilior erit significatio sua, quā dum fuerit in angulis ab ascendente signo. Nec minus de Marte iudicabis secundum qualitatem suam, quem modo prædicto in angulis existētem, vel succedentibus, remissius tamen, in significatorem elegeris, & sic de planetis alijs. Quorum etiam cōmistionem, & aspectuum reciprocationem, & in signis permanentiam cōsidera. Aspice similiter Mercurium, qui si fuerit in medio cœli in signo aereo, significat diuersitatem magnam in aere, tonitrua magna, & crebra fulgura, maxime si aliqua infortunarum fuerit in angulo aliquo ab ipso Mercurio. Et adiuua te in hoc a' parte aeris, & ventorū, faciendo hanc participem cum significatore ipso. q; si fuerit cum parte eadem repertus, vel eiusdem domino, iudica ex eo, sicut ante diximus, per existētiam ipsius in angulo, & aspectus alios planetarum. Pars hęc accipitur a' loco Mercurij vsq; ad gradum domini domus in qua est, addendo desuper gradus ascendentis. et proijcitur deinceps ab ascēdentis signo & vbi finitus fuerit numerus, ibi est pars prædicta. quod si Mercurius fuerit in domo sua, accipe suosmet gradus vsq; ad ascendens, & proijce ab ascendente. Et tunc vide quomodo fuerit pars illa cum planetis, & secundum hoc iudica. Et illud quod diximus de introitu Solis in Arietem, hoc idē facies de ingressu ipsius in quamlibet quartarum Zodiaci. Similiter de ingressu Solis, & Lunæ in quodlibet signorum duodecim. Tamen fundamentum & radix omnium prædictorum est ab ascendente coniunctionis, vel oppositionis quartarum anni, & a' domino tunc ascendentis, & domino locorum ipsorum, quoniam quando isti fuerint in locis humidis & pluuiosis, significant pluuias, maxime si applicuerint planetis humidis, & pluuiosis, & si econtra, contrarium iudica.

¶ Et scias q; quādo planeta significator fuerit occidentalis, retrogradus vel parui motus, aut descendens in latitudine, vel in circulo suæ augis significat pluuias, & econtra. Item si fuerit combustus pluuias designat, pręter Martem, qui solus combustus pluuias minuit.

¶ Scitur etiam dispositio aerea in pluuijs tonitruis, & coruscationibus ab introitus Solis in. 20. gradum ♏. Nam si tunc Iuppiter, Venus, & Mercurius fuerint occidentales, aut retrogradi, iudica anno illo pluuias multas. postmodum considera stellam Saturni, & Martis, quorum alter fortior sit, & quam societatem cum planetis, & Mercurio præsertim habuerit.

¶ Albumasar partem diei assumit, quando Sol oritur die qualibet accipiendo gradus, qui sunt a' Sole ad Saturnum, numerum illum proijciens

a Luna, & secundum locum, & naturam planetæ aspicientis illum, in quo cadit numerus ipse, de die illo diiudicat. Et similiter ab ascendente introitus Lunæ in quodlibet signorum, donec manserit in eo.

¶ Ex Leupoldo tractatu sexto de mutatione aeris.

PRo quartis anni consideranda sunt initia æquinoctiorum, solstitiorum, & præcedentes coniunctiones, vel præuentiones luminarium, & anguli cœli, & domini prædictorum locorum omnium, necnon coniunctiones, & applicationes planetarum, naturę signorum, & stellarum quæ in eis sunt exfixis, & planetarum in se, & mansiones Lunæ. 28. demum regulę, quas ponunt Astrologi de mutationis aeris ꝑcognitione.

Propterea signa humida sunt ♋ ♌ ♏ & ♒. his additur ♐ & ♓. Partes quoq; signorum humidę sunt fines ♈, principium ♉ & ♋, finis quoq; ♑, & initia ♒ & ♌.

Pluuiales natura sunt Venus, Mercurius, & Luna.

Saturnus autem cum pręfuerit anno absq; aspectu ♂, vel planetæ frigiditatem ipsius temperantis, frigus intimat, & magis cum fuerit ascendens à medio circulo suę augis.

Iuppiter absq; aspectu alterius, vel cum Sole etiam aerem temperat, & facit ventos septentrionales, mediocres tamen.

Mars cum pręfuerit anno absq; aspectu ♄, vel planetæ infrigidantis, hyemis frigora cōtemperat, æstatis calorem auget, & eo magis in signo calido, & si ascendat in circulo suæ augis.

Sol variat anni quartas ſm coniunctionem, & aspectus planetarum ad eum. Saturnus namq; cum Sole in hyeme absq; aspectu Martis auget frigus, in æstate calorem minuit, & eo magis in signis frigidis.

Venus autem quocūq;, vel sit cū Sole, vel præsit anno, in vere, & hyeme humiditatem auget, in æstate & autumno siccitatem minuit, maxime in signo humido, & dum eam planeta siccus minime aspiciat.

Mercurius eodem modo cum ☉ qualitatem aeris variat, & corrumpit ventos, maxime in humidis, & ventosis, in calidis vero, & siccis, siccitatem adauget.

Luna quolibet mense naturam, & qualitatem aeris cōmiscet, & tēperat ex coitu Solis, quemadmodum Sol idem in anni quartis.

¶ Ex eodem tractatu regulę hę comprehenduntur.

In reuolutione anni si ♂ in signo proprio est, multum pluet, in domo ♄, parum, in alijs mediocriter.

In con. vel oppositione luminarium, quæ pręcedit reuolutionem anni si ♂ locum illum aspiciat, erunt fulgura, tonitrua, & lampades.

Annuales pluuię secundum Indos pręsciūtur sic. In con. ☉ ☽, vel oppo. quę pręcedit reuolutionē anni in ♈, si Luna aspiciat ♄, & ambo sint in

figno humido, & non interceperit aſpectus ♃, erunt nubes nigræ, & pluuia lenta, & durans. Et ſi planetæ inferiores, videlicet ♀ & ☿ Saturnum aſpicient, tunc erit pluuia maior, & durans.

In reuolutione anni ſi ♀ ☿ & ☽ in locis humidis fuerint, pluuiæ redundabũt. idem de partibus trium horum intelligas. Et in hoc accipiuntur gradus, hora ☌ vel ☍ luminarium æquinoctium vernum præuenientis, qui ſunt à Mercurio in dominum ſigni, in quo fuerit ☿ ipſe, & addi tis gradibus aſcendentis ſigni ab horoſcopo proiiciũtur. Et ſic iuxta dominum loci, vbi terminatur numerus ille, diiudica. Quod ſi ☿ in propria domo fuerit, accipe ſuoſmet gradus, & proiice vt ſupra.

Item pars alia pluuiæ accipitur in die à ♀ in ☽. in nocte vero econuerſo, & proiicitur ab aſcendente quæ ſi cadit in loco humido, multę erũt pluuiæ, & econtra. Et cum ad locum illum ☽ vel ♀ peruenerit pluet.

Cum Sol tropicum intrat ſignum, ſi ♀ tunc de humido lunam aſpexerit in humido, pluuiæ erunt multæ. Si tunc Luna non eſt in humido, ſed ♀ tantum temperat.

In reuolutione ſi ☽ aſpicit ♀ vel ☿, & ambo ſunt orientales, in principio anni erunt pluuiæ, ſi occidentales econtra.

Item ſi ♂ tunc de ♏ ♀ aſpicit, pluuiæ abundant.

Cum ☉ eſt in ♈ vel ♉ & ♀ tunc retrograda, ver erit pluuioſum valde.

Si Soli à ♑ in ♈, hoc eſt in hyeme planeta ſolus retrogradus iũgatur, ſiccitas erit. Si duo, humiditas cõgruens. Si tres, humiditas addẽs. Si quatuor ſiet diluuium. de ſuperioribus nõ poteſt hoc eſſe, niſi per aſpectum.

Sol in terminis ♂ in æſtate calorem auget, in hyeme & vere ſiccitatem.

In autũno ſi omnes planetæ cum ☉ retrogradi ſint, & in hyeme dirigantur, erit ſiccitas ſumma in omni climate.

Et ſi in quarta æſtiua planetæ quinq; ſint directi propter eorum infrigidationem, æſtas eadem erit decora. Si tunc retrogradi, erit calida, nam retrogradi calefaciunt, & directi infrigidant. Similiter ſi ſunt in ſummitatibus eccentricorum ſuorum, minus calefaciunt, cum deſcenduntad fundum epicycli, atq; eccentrici ſui, caleſcunt magis.

Leues combuſti in quarta autumnali frigus faciunt, atq; humiditatem, in quarta hyemali nubila, & ventos meridianos, in vernali nebulas, in æſtiuali caliditatem, & tonitrua. ſimiliter & de ponderoſis.

Cum Sol intrat. 1 8 ♏ ſi tunc ♀ in aqueo fuerit, erunt pluuiæ ad ſubmerſionem.

Venus retrograda, & orietalis ☉ in ♑ ♒ & ♓ in vere dat imbres paucos, in principio vero hyemis abundanter.

Item ♀ in hyeme directa, & orientalis, in principio dat pluuias paucas, & in fine hyemis multas, ni ſtella alia ☉ occurrat affinior.

¶ Dies & tempora pluuiosa particulariter dignoscere.

PArs diei accipitur oriente Sole die quouis, quantum est videlicet, ex gradibus, à ☉ in ♄, & hoc totum proiice à loco Lunę. Quòd si in humidum cadet, humiditatem significat die illo, & econtra. Similiter in domo ♀ & ☽ pluuiam. in domo ☉ & ♂ serenitatem. in domo ♃, & ☿ ventos. ♄ autem signum nubila significat.

Luna etiam cum ♀ vel ☿ in humido, & magis cũ vtroq; pluuiã adauget. Qđ si fuerit in ♏ in opposito ♂ idẽ efficiet, maxĩe ☉ in ♒ vel ♓ existẽte.

Cum Luna & ♂ sunt simul in humido, & alter inferiorũ ♀ scilicet, vel ☿ aspicit ♂, nubila erũt terribilia, lampades, tonitrua, & grando, sed non pluet, nisi Mars aspiciat ♄, ♃, vel ☉.

Luna intrans ♋ hora Solis, Virginem hora ♀, Libram hora ♃, Sagittarium hora propria, taurum hora ♂, Geminos hora ☿ significat secundum naturam domini horę, & signi in quo erit ipse.

Cum Luna intrat ♒, vel Pisces vertit aerem, & perturbat. dum autem ☿ adusto applicat, aut eidem de ♏ opponitur, pluuiam facit.

Cum ♀ Marti applicat in ♏ statim pluet.

Cum ☉ ♀ ☿ & ☽ sunt simul, imbres continuos faciunt, die eademmet, etiam si Luna aspiciat eos aliunde.

Luna Solem in ♒ ex ☍ vel □ aspiciens, pluuias ciet, ♀ ibidẽ cõmorante.

Cum ♀ est in angulo in ☌ vel ☍ luminarium, certum est pluuię indiciũ. Similiter dominus ascendentis in angulo aqueo.

Venus sub radiis ☉ à ♎ in ♈, Luna eisdem ♀ maxime applicãte, die eadem pluuiam facit. similiter dum ☉ ♋ signum init.

Itidem cum Luna in cardine aqueo ♀ applicat, vel ☿, pluet, quamdiu applicatio durat.

Cum Luna est in opposito ☉ aut cum ♀ in ♈ ♎ ♏, vel ♓ erunt imbres, vel lampades, tonitrua, & fulgura.

Luna in signo fœminino respiciens planetã retrogradum in signo fœminino statim pluet. nec minus eadem iũcta planetę retrogrado. dum aucta est lumine, signum est pluuię.

Indi diem pluuię sciunt per distãtiam con. oppositionis, vel quadraturæ luminarium ad gradũ planetę pluuialis. Ita ꝙ si Luna est in signo mobili, dant cuilibet gradui horã vnã, in fixo diem, in cõmuni in prima medietate eiusdem dant diem vnum, in secũda medietate horam. Et tunc pluet. Quòd si Mars tunc ♄ aspexerit, differtur pluuia, quousq; Luna ♄ aspiciat ☍ vel □ aspectu in sicco, sed tunc pluet si ☽ vim det ♃ (existẽte vtroq; in humido) & alter inferiorũ ♃ aspiciat. verũ nubila erunt (☽ & ♃ sic se habentibus) si neuter inferiorum ♃ aspiciat, sed si ipse ♃ ♄ aspiciat, pluet,

Apertiones portarum pro pluuijs, aut ventis decem sunt, aspectus v3, & coniunctiones planetarum quorum domus contrarie sunt, vt ♄ & ☉, ♄ & ☽, ♃ & ☿, ♂ & ♀. SI mutationẽ aeris certius, q̃ pędiximus scire volueris (minor nãq; virtus vertitur p maiorẽ, & maior attrahit, & in se conuertit minorẽ) per dñm coniunctionis ☉ & ☽ quadraturę, aut ☍ ex syderali, ac cœlesti figura iuste verificata hoc verius agnosces. Habita nanque figura cœli pro tempore pręciso, & ęquato ipsius ☌ □ aut ☍. in primis cõsidera in quam domum cœlestis figuræ, & in quod signum coniunctio eadem □ aut ☍ cadat. Deinde signũ, & gradum ascendentem diligenter attende,

Cęterum signa q̃ in angulis sunt obliuioni non trades. Planeta enim qui in his locis omnibus plura habuerit testimonia, & dominia, is profectò huius figuræ, & temporis dominus principalis censebitur, qui verò pauciora, particeps erit in dominio. Illud tamen non est ignorãdum, φ planeta, qui in loco coniunctionis □ aut ☍ & ascendente plura habuerit dominia, alterum antecellit, & ei pręponi debet. Animaduerte igitur cuius sit naturę planeta in figura prędominans, quia generalis temporis dispositio ad qualitatem huic planetę appropriatam accedet. Vtsi Saturnus erit dominus temporis coitionis □ aut ☍, huiusmodi tẽpus erit frigidũ, & siccum. Si Venus humidum. Rectè philosophantes in ea re Solem, & Lunam in dominos nõ eligunt, quia planetas duntaxat generales temporum gubernatores esse affirmant. Sanè in coniunctione eligũt dominum à loco ☌. in oppositione autem à loco huius luminaris, quod supra terrã est, aut in oriẽte pręcisè, quia ibi maior ei adest virtus. Itidem de quadratura ferè afferunt, cuius locum accipiunt à loco luminaris existentis supra horizontem, si alterum sub terra est. Sed si vtrũq; (quod plerũq; contingit) fuerit supra, vel sub terra, locũ huius luminaris, qui in figura fortior, & fortunatior apparet, in locum quadræ assumunt, vtpote si fuerit vnum luminare in angulo, aut succedente, & alterum in cadente, locum luminaris in angulo, aut succedente, tanq̃ fortiorem, in locum quadraturę acceptant. Generaliter autem dictum velimus, φ planetarum testimonia, & dominia venanda sunt ex tabula propria pro eiusmodi rebus indagandis infra luculẽtissime exposita. Delecto igitur domino ad tempus ☌ □ aut ☍ luminarium, notabis primo eius affectionem, aut naturã, quia plerũq; tempus eãdem imitabitur. Secundo considera signum quod delectus dominus possidet, ad cuius qualitatem igneam, aeream, aqueam, aut terream tempus ipsum disponetur. Tertio diligenter attende signum ascendens eius affectionem, & de qua mãsione lunari existat. Dominum etiam signi ascendentis consideratu dignum minime posthabeas. Quarto animaduerte planetas q̃ in angulis sunt, qui enim angulũ decimũ, aut ascendentem occupant, potior. s, & fortiores sunt his, qui septimum, aut quartum tenent. Quinto vide cum quo planeta Luna post ☌ □ aut ☍ aspectum ineat. Sexto considera quibus planetis, aut stellis fixis dominus figurę sit iunctus, aut ab eis aspectu affectus. His omnibus perspectis tandem correlarium inferas magnum. Si dominus coitus □ aut ☍ fuerit affectione humidus, & loca principalia prænarrata, & planetæ in his humidi, Et si, cum hoc ipse dominus fuerit coniunctus stellis, aut planetis humidis, aut ab eis aspectus, & luna post separationem coierit, aut aspectum habuerit cum planeta humido, & cum hoc natura temporis concordauerit, Si hæc omnia, aut potior pars, ad humiditatem decli-

nauerint, eueniet humiditas. Si ad ficcitatẽ, accidet ficcitas. Si ad calidi-tatem, calor. Si ad frigiditatem, frigus. Quòd si testimonia fuerint æqualia, tempus indifferens iudicabitur. Agnita (vt iam expositum est) generali dispositione temporis, applicationes Lunæ ad planetas, & planetarũ inter se ex diario receptas cum dispositione generali ipsius temporis commisce, & euades rerum particularium certior iudex. Demũ hæc duo particulariter notanda sunt, videlicet.

Primum temporis significatio tunc maxime mouebit, cum Luna post coitionẽ □ aut ☍ significatori corpore, aut aspectu valido iungetur.

Secundũ cum Luna peruenerit ad signũ ascẽdens cõiunctionis □ aut ☍, tunc mutabit tempus secundum affectionẽ, & naturam ipsius signi.

De æquatione dierum, & diebus vulgaribus, & æquatis.

Aequationē dierum post meridiei normam Ephemeri cuilibet, non minus q̃ astronomicis tabulis pro planetarū motibus haud quaq̃ inutilem censemus. Sic enim exquisitius ipsorū & præsertim lunæ motus, ad horas quaslibet, & minuta ex diario adæquatur. Alius est enim inæqualis dies, apparens, & vulgaris (a quouis fere cœli puncto sumpto exordio) tum ob inæqualem motus Solis additionem diurnæ eiusdem lationi ab ortu, vel a meridie ad eundem cœli locū, tum ob zodiaci, atq; horizontis obliquitatem, & disparem ꝑpterea signiferi partium ascensionem. ob quæ docuerunt nos prædecessores nostri astrorum obseruatores dies oēs naturales, vt supra, inæquales perceptos, ad æqualitatem ex tabula æquationis dierū adduci. Alius ergo hic erit æqualis dies astronomico more a meridie quouis assumpto initio, ad quē planetarum motus, & tabulæ queq; stellarum motuū exquisitissime regulantur. Alius dies æquatus vt i fra. Cum nāq; ex diurna, & inæquali mótus Solis additione supra primi mobilis deuolutionē, plus vel minus medio, & æquali motu apparens dies excreuerit, adhibita huic ascēsionali norma ad æqualitatem dies eadem per propriam tabulæ huiusce normam deueniet. Vbi vero æquatio dierum ad minuta. 33. horarū, vel prope concreuerit, mox pedetentim per diminutionē temporis ad nihilum, vel nulla redigetur. Habitis ergo diebus mensium, & horis ꝓpositis, ad quas planetarum motus adæquare desideras, cum vero loco Solis tabulam hanc æquationis dierum ingredere, quodq; ex minutiis horarum in angulo cōmuni signorum, & veri loci Solis inueneris, hoc totum ab horis vulgaris diei, a quouis etiam meridiano acceptis (ad quas ascendens, & cætera cœli domicilia eriguntur) educes. hac demū subtractione peracta, cum reliquo horarum, & minutorum (dempta prius, vel addita meridianorum distantia) veros planetarum motus ex diurno per propriam tabulæ exarationem, superius descriptā edisces. Quam quoniam dierum æquationem horæ quælibet in coniunctionibus, & aspectibus planetarū Ephemeri cuilibet ascriptæ, atq; etiam in radicibus introitus signorū singulariter acceperunt, nō hac ideo æquationis norma indigēt eædem prius. s. adæquatæ. Quare adhibita tantū horarum adæquatione ab vno ad alium regionis meridiem iuxta præmissæ tabulæ seriem, atq; amborum etiam meridianorum distantia ex vtraque regionum vel ciuitatum tabula inferius exponenda, ascendens, & cæterarum domorum cuspides ad horas hasce diei, æquati scilicet institues.

Tabula Aequationis dierum recognita.

Et sic tabula latitudini. 42. graduũ inscripta, duabus etiam latitudinibus. 41. &. 43. graduum, non inepte accõmodabitur. Deniq; tabula pro. 54. gradibus conscri/ pta. 53. &. 55. gradibus seruiet. Haud aliter, de tribus reliquis interceptis, intel ligendum est. Nunc ad rem ipsam fauste properemus. ¶ Ad meridiem diei pro libito accepti, sume ex Ephemeride motum Solis cuius signum quęre in fronte tabulę, sub numero polari tuę habitationi conuenienti, aut viciniori, gradum vero Solis, in linea decimę domui assignata, perquire. Quibus inuentis, è dire/ cto gradus Solis dextrorsum, initia quinq; domorum coeli vndecimę videlicet, duodecimę, primę, secundę & tertię, ad meridiem ppositi diei, dicto citius de/ prehendes. Ipse autem gradus Solis principium regię domus, quam decimam appellamus, ostẽdet. Quod si gradui Solis minuta aliqua adhęserint, hac lege initia duodecim domiciliorum coeli, tẽpore meridiano agnosces. Gradum So/ lis integrum, vt iam exposuimus, in tabula percontare, ad cuius sedem accipe, extra scribendo, tempus à sinistrã, & quinq; domorum vndecimę, duodecimę, primę, secundę & tertię, initia ad dextram. Tempus sic extra scriptum confer ad tempus, immediate sequens maius, differentiam sumendo, quã tempori iam extra scripto subnecte. Idem fac omnibus domorum principiis, suam cuilibet differentiam subscribendo. De differentia igitur temporis extra notati & mi/ nutis Solis, accipe partem proportionalem, secundum proportionem omni/ bus notissimam ad. 60. minuta, quam partem proportionalem imitte in tabel/ lam cuius titulus est, Quatuor minutorum temporis, quęrendo minuta in li/ nea minutorum ad sinistrã, & secunda (si qua fuerint) aut propinquiora in linea secundorum adhęrenti. Differentiam autẽ domus, puta vndecimę duodecimę

¶ Ad tempus aūt quodcūq; post meridianū, initia duodecim cœli domiciliorum hac norma absolues. Cum signo & gradu Solis, ex Almanach receptis ingredere tabulam domorū tuę habitationis, quēadmodum prælibauimus, & e uicino gradus solaris sinistrorsum tēpus in horis & minutis repertū extra notato. Memento tamē si gradui solis minuta affuerint, differētię sumendę: de qua & minutis Solis accipe partē proportionalem iuxta integros gradus ad. 60. minuta, quā partē proportionalem tempori extra scripto adiunge, minuta minuciis: & secūda si. 30. excesserint, eorum loco minutis vnitatem appone: si pauciora. 30. fuerint, reiice ea. Tempori sic rectificato pro gradu & minutis Solis, adde tēpus tuū post meridianū minuta minutis, & si. 60. attigerint, pro eis vnam horā ad horas præcedētes augeas, adde etiā horas horis, & si ad. 24. aut plures creuerint, reiice. 24. reliqs seruatis. Adiunge tandem pro qbuslibet. 6. horis tpis postmeridiani vnū minutū tempori iam seruato, & conflabis tēpus præcisum & egregium intētioni tuæ. Cum quo tabulam domorum tuę habitationis ingredere, & in quo versu horas & minuta aut viciniora offendes, mox in eodem sex domos cœli agnosces.

¶ Si aūt ad tēpus antemeridianū. 12. cœli cuspides statuere volueris, distātiā propositi tpis à meridie surripe à tpe per signum gradum & minuta Solis secūdum modum præexpositū verificato, aut à. 24. horis accōmodatis (si aliàs surreptio fieri nequeat) deme etiam toties vnitatē quoties distantia tpis à meridie senarium cōtinet, & cum residuo intra tabulam domorū, & age quēadmodū de tpe postmeridiano præcepimus, & in certā notitiā sex cuspidum cœli deduceris. Obseruādum tū quod quotiescunq; tēpus finaliter quęrēdum in tabula repertum nō fuerit, intrādum esset cum tpe minori illic reperto, & cum residuo tēpore, & differētiis domorū elicies portiunculas domibus adiiciendas, & sic rite oīa absolues. Sex domibus quātum ad earum initia aut cuspides cognitis alię sex per diametralem oppositionē in ipso zodiaco quā facillime cognoscent. Si præcisionem oīmodam in cœli domibus cōstruendis amas, Ioānis de Regiomonte directorium cōsule, sed plus te difficultas operis anget quā pręter vtilitatē subtilis præcisio delectationis īgeret. Postremo, habitis initiis. 12. edium cœlestium suscita pro tua industria figurā cœli quēadmodum iudices astronomię vsitato erigunt atq; depingunt. Cui ex Ephemeridario insere (prout res ipsa exigit) loca planetarū, in hanc enim domum planetā quēpiam intrudes quę eius gradum sub quo planeta decurrit in figura cœlesti cōprehēdit. tandem vaticinare effectus futuros, res naturę secretissimas & profecto miratu dīgnissimas, Lector vale.
